

PDC – discussion session

G. Kramberger, E. Fretwurst

What to do?

- Search for evidence of avalanche effects in pads/strips
- Modeling of avalanche effects and its implementation in simulations
- Mixed irradiations at high fluences
 - From DE point of few $n + \gamma$ would be interesting
 - Order of irradiations (systematic)
 - Different mix ratios and high fluences
- Irradiations under bias for MCz, FZ detectors

- As always, extending the pool of materials studied by standard CV/IV/CCE/TCT!
