Subject -------------------------------------

_____

Meetings
    Catania:
        Not everyone there either tue or thur
        Informal get together on Wed night.
        Ad-hoc meetings tue/thur as needed
    F2F in April
        No good consensus for when a majority of people are around
        Have 2 sessions:
        Mar 30-> April 3 : Nagios + SAM + Central Metric Store

        Try for a session on week of 20th April ?
          - Regional Dashboard/SAM/GOCDB

          -    Clash with ISGC - we can try for last week of March too.

GOCDB
    Detailed schedule in http://goc.grid.sinica.edu.tw/gocwiki/GOCDB4_development

    WS interface as a backup to the PI in case of :
        complexity in queries and advanced authz for write operations
        Also to have a 'Standard' if other people want to interface
    OAT should mandate tools to move to the GOCDB PI by June in order to let Gilles phase out direct
    DB connection by August

    Is Oracle a hard dependency to GOCDB?
    Yes and No - for now, yes. It should be possible to reimplement for any DB which has stored
    procedures. GOCDB won't be looking at doing this work in the current schedule

    James: We should, for all components, have a description of the deployment environment (dev
    language, application server, DB flavour).

    Region 3 use-case is a standard interface so that any regional system (e.g. HGSM) can send their
    data up to GOCDB.

Accounting
James: Who be most interested in trying out the Option B : APEL with regional

Lyon would be a good prototype for testing the new publication method via MSG
South West would be good for testing the collector.

 Accounting Portal - need to have some milestones for distribution and verification of the distribution
- this is for region 2, so we have a 'complete' regional accounting for 'Region 2' regions

Need to clarify deployment milestones:
Patch for glite by end-June.
Need some intermediate deployment milestones
e.g. All WLCG T1 by XXX
50% of EGEE sites by YYY

Regional Dashboard
In the 'regionalized' dashboard (Central service at IN2P3 with regional views) where is the mapping from nagios notification to GGUS ticket kept ?

AOB

Next Meeting
In a bar in Catania
