Adopting Red Hat Satellite 6 for Lifecycle Management

Thursday 20 October 2016 16:10 (25 minutes)

An overview of results and lessons learned from the Fermilab Scientific Linux and Architecture Management (SLAM) group's Satellite 6 Lifecycle Management Project. The SLAM team offers a portfolio of diverse system management service offerings with a small staff. Managing the risk of resource scarcity involves implementing tools and processes that will facilitate standardization, reduce complexity, and increase efficiency whenever possible. This short talk will give a brief overview of our experience and the results and the future of migrating to Satellite 6.1 as our new base for System Management.
