Lasers in ophtalmology - a physician story for the physicist -

Thursday 7 July 2016 12:25 (20 minutes)

The aim of the presentation is to describe actual lasers applications in ophtalmology, for therapy and diagnostic. Different eye diseases are explained physipatologically and therefore the use of lasers based on their specific laser-tissue interaction. The goal is for the audience to have an idea about the importance of lasers for our vision.
