

# Recent results on $\psi(3770)$ and open charm from BESII and CLEO-c

*Monday, 27 April 2009 16:00 (20 minutes)*

We present the latest results on the production and decays of  $\psi(3770)$  and decays of open charm from BESII and CLEO-c experiments. BES observed anomalous line shape of cross sections for  $e^+e^- \rightarrow$  hadrons between 3.65–3.872 GeV and also measured line shapes of  $D\bar{D}$ -bar production and the ratio of the production rates of  $D^+D^-$  and  $D^0\bar{D}^0$ -bar at  $\psi(3770)$  resonance. CLEO-c measured  $D_s$  decay constants from 600 pb<sup>-1</sup> data near 4.17 GeV and measured absolute branching fractions for exclusive  $D_s$  semileptonic decays.
