

Recent measurements of top quark production cross section at CDF

Tuesday, 28 April 2009 11:40 (20 minutes)

With the large data samples collected at the Tevatron, top quark physics has entered the realm of precision. We present here the latest results on top pair production cross section at CDF, which uncertainties are comparable to those of the theory prediction. The exciting results on the challenging channel of the electroweak production will also be shown.
