

Efficient Forensic Photos

Pier 37: ID Hunters

Final Presentation

Find us at: <https://theportatcern.github.io/Hackathon2016-Pier37/>

The context

**Natural disasters
with thousands of
victims ...**

**Aftermath of Hurricane Matthew, Haiti,
Oct 4, 2016**

A forensic identification problem ...

-  Flood
-  Storm
-  Drought
-  Landslide
-  Earthquake
&
Tsunami
-  Wildfire
-  Extreme
temperature
-  Volcanic
activity
-  Mass
movement (dry)

On-Site Bodies Collection

Morgue

Data collection

Body cremation

Family identification

Body on table leads to issues in framing the full body picture.

Main issues:

- Frame
- Light
- Focus
- Stability

What we aimed for?

POrtable Photo Studio (POPS)

- A Forensic Photo
Toolkit

Constraints

- Use existing cameras- all kinds of SLR Camera
- Inexpensive readily-available components
 - Compact - fits in a normal size backpack
 - Easy to use by first responders (Police or Forensic Staff)

Adaptable and universal solution required

Stability while taking Pictures

Before

After

Lighting

Light and
foldable
structure

+

LED strip

Laser framing

- Framing using reference given by the laser
- Can be used in the post-process phase to calculate dimensions

Analog trigger

- Not all cameras have remote control, not universal
- Camera is ~1.5m away
- We need a universal mechanism to trigger the camera

Resources

Hardware list

Item	Price	Purpose	Alternative Options
2x Class 1 lasers	6 \$	Markers	
Camera clamp	15 \$	Attach the structure to any stick	
Electrical switch	< 1 \$	Activate the laser markers	
2 meters electrical wires	< 2 \$	Connection for the lasers	
Cable ties	< 1 \$	Fixing lasers to metallic structure	
Bicycle brake kit	17 \$	Trigger for the DSR camera	Camera Remote Control with smartphone
Metallic parts	5 \$	Support for the DSR camera and trigger structure	
Metallic stick	10 \$	Support for the camera	Broomstick, long selfie stick
LED strip	10 \$	Lighting of body	Professional photo equipment: flash, lights..
Tent poles	20 \$	Lighting structure	Professional photo equipment: flash, lights..

Total: < 100 \$

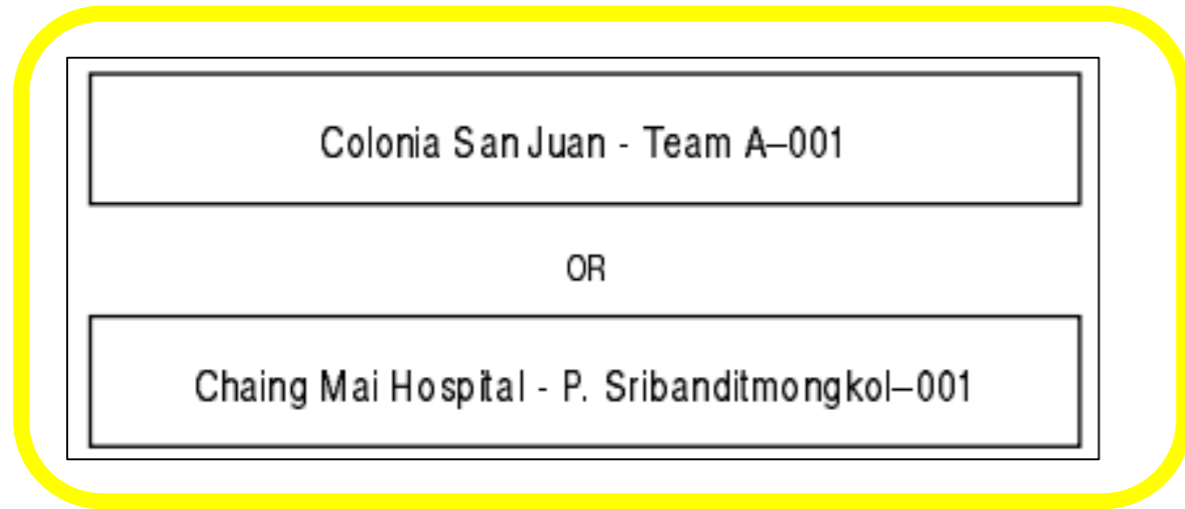

Instructions and material list available at
<https://theportatcern.github.io/Hackathon2016-Pier37/>

Future Ideas ...

- **Automatic matching** of forensic pictures against the picture provided by family members
- **Post-processing:** Auto-annotation of images with their detailed text description of body characteristics to expedite the documentation process followed by the forensic experts

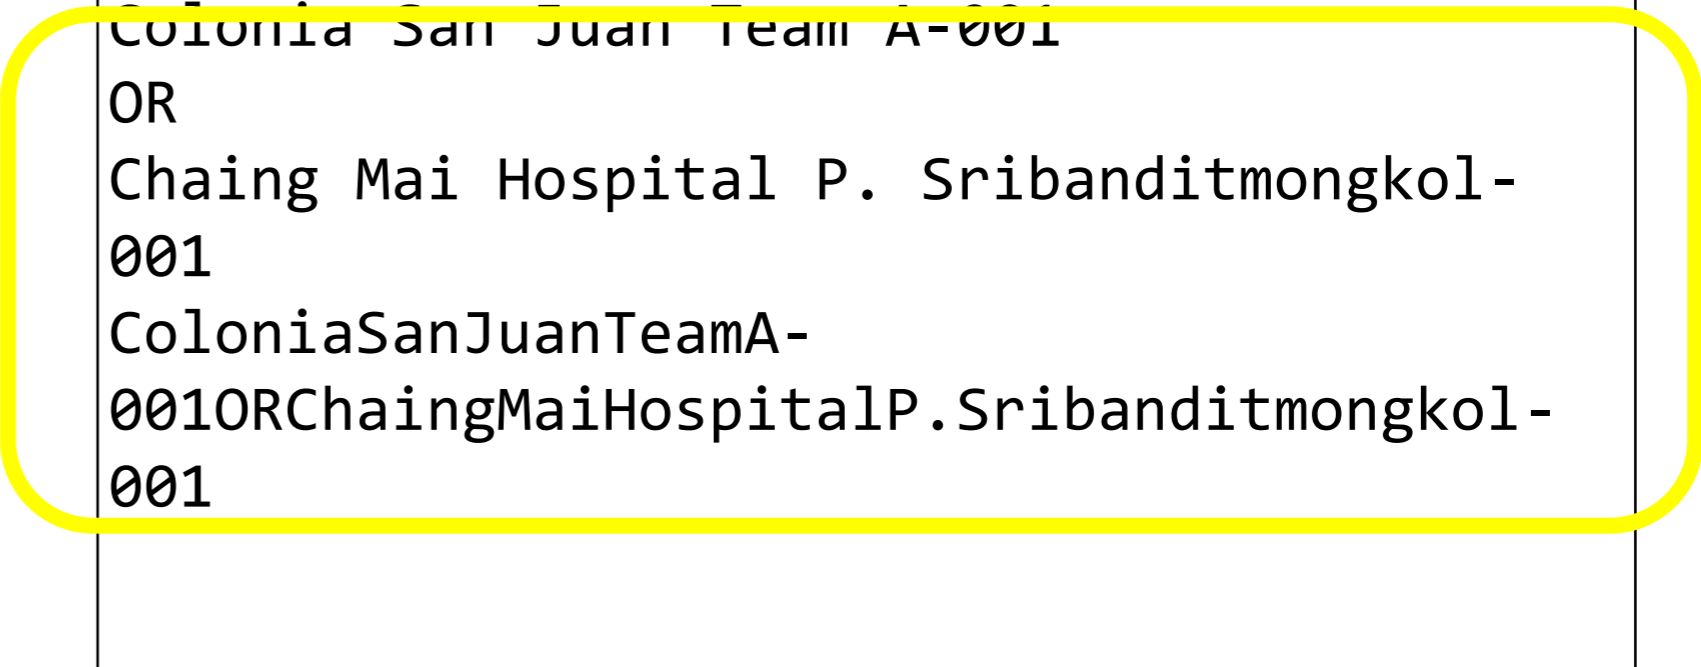

Post-Processing: Text extraction

[Using Google Cloud Vision API](#)

A) Whole Face

Post-Processing: Auto-annotation

Using Google Cloud Vision API

- Clothing
- Male
- Muscle
- Toy
- t shirt

Thanks!
