

# MoreThanALICE

Developing an augmented reality mobile application for the ALICE detector

J. Ouellette, B. von Haller, & J. Niedziela

# Goal:

Development of a mobile app in Unity describing the ALICE detector, featuring both

- an augmented reality (AR) interface, and
- a virtual reality (VR) interface,

as well as the potential to overlay nearly-live collisions occurring in the detector from a central database.

# Features Summary

## ALREADY IMPLEMENTED

- VR detector mode, with
  - improved controls,
  - labeled detectors
- AR detector mode
  - labeled detectors that are tracked on the screen
  - functionality with detector models and pictures

(with some caveats)

## TO BE IMPLEMENTED

- ALICE collisions overlay
- Multi-language support (possibly limited)
- More accurate VR detector

# Features Summary

## ALREADY IMPLEMENTED

- VR detector mode, with
  - improved controls,
  - labeled detectors
- AR detector mode
  - labeled detectors that are tracked on the screen
  - functionality with detector models and pictures

(with some caveats)

## TO BE IMPLEMENTED

- ALICE collisions overlay
- Multi-language support (possibly limited)
- More accurate VR detector

Component Description

# Augmented Reality Scene

## Current Trackable Components:

- DIMUON
- EMCAL
- PHOS
- TPC
- TRD
- TOF

## Current Nontrackable Components:

- ACORDE
- HMPID
- ITS
- PMD
- SOLENOID
- VZERO

# Augmented Reality Scene

## Current Trackable Components:

- DIMUON
- EMCAL
- PHOS
- TPC
- TRD
- TOF

## Current Nontrackable Components:

- ACORDE
- HMPID
- ITS
- PMD
- SOLENOID
- VZERO

... a good place to start for subsequent versions!

# Project Structure

- Written in C# (31 scripts in total)
- Scenes directly assembled in Unity
- Improvement over v1.0: 31 vs. 335
  - 91% decrease!
