An emergent Van der Waals-like description of black hole entropy

Tuesday, 9 May 2017 09:40 (20 minutes)

A semiclassical statistical mechanical approach to black hole entropy based on Van der Waals horizon thermodynamics for the Schwarzschild–de Sitter solution has been developed. Emphasis on the emergence of spacetime atoms and their relationship with particular observers have lead us to propose a simple physical model through which areas are quantized in accordance with other approaches.
