## **INVITED TALK 2: Matthias Gaberdiel**

Monday 20 February 2017 14:15 (35 minutes)

Title: BPS states in AdS\_3 x S<sup>3</sup> x S<sup>3</sup> x S<sup>1</sup>

The BPS spectrum of string theory on AdS\_3 x S<sup>3</sup> x S<sup>3</sup> x S<sup>1</sup> is determined using a world-sheet description in terms of WZW models. It is found that the theory only has BPS states with  $j^+ = j^-$  where  $j^{\text{ym}}$  refer to the spins of the two su(2) algebras of the large N=4 superconformal algebra. We then re-examine the BPS spectrum of the corresponding supergravity and find that, in contradistinction to previous claims in the literature, also in supergravity only the states with  $j^+=j^-$  are BPS. This resolves a number of long-standing puzzles regarding the BPS spectrum of string theory and supergravity in this background. [This is based on joint work with Lorenz Eberhardt, Rajesh Gopakumar and Wei Li.]
