Working Together

● ● ●

Benedikt Hegner
(CERN EP-SFT)

21.9.2016

Communication and Exchange is the key!

- [Discussion list](#)
- Bi-weekly [Gaudi developers meeting](#)
- Place to discuss
  - Ideas and designs
  - Prototypes
  - Decide on final implementation path
  - Controversies
- [JIRA Issue tracker](#)
  - Bugs and development tasks
- [Gitlab](#)
  - Discussing merge requests

Code Integration

In the ideal world development would look like

- Common understanding on new component
- Creating/updating JIRA ticket
- Writing tests
- Implementing it
- Local testing
- Submit merge-request
- Testing against experiment code
- Review and merge
- Creating new release

Code Integration

In the ideal world development would look like

- Common understanding on new component → developers meeting
- Creating/updating JIRA ticket
- Writing tests
- Implementing it
- Local testing
- Submit merge-request
- Testing against experiment code
- Review and merge
- Creating new release

Code Integration

In the ideal world development would look like

- Common understanding on new component → developers meeting
- Creating/updating JIRA ticket → not always done
- Writing tests
- Implementing it
- Local testing
- Submit merge-request
- Testing against experiment code
- Review and merge
- Creating new release

Code Integration

In the ideal world development would look like

- Common understanding on new component → developers meeting
- Creating/updating JIRA ticket → not always done
- Writing tests → not well documented
- Implementing it
- Local testing
- Submit merge-request
- Testing against experiment code
- Review and merge
- Creating new release

Code Integration

In the ideal world development would look like

- Common understanding on new component → developers meeting
- Creating/updating JIRA ticket → not always done
- Writing tests → not well documented
- Implementing it → limited to SL6 and CC7 !
- Local testing
- Submit merge-request
- Testing against experiment code
- Review and merge
- Creating new release

Code Integration

In the ideal world development would look like

- Common understanding on new component → developers meeting
- Creating/updating JIRA ticket → not always done
- Writing tests → not well documented
- Implementing it → limited to SL6 and CC7 !
- Local testing → OK
- Submit merge-request
- Testing against experiment code
- Review and merge
- Creating new release

Code Integration

In the ideal world development would look like

- Common understanding on new component → developers meeting
- Creating/updating JIRA ticket → not always done
- Writing tests → not well documented
- Implementing it → limited to SL6 and CC7 !
- Local testing → OK
- Submit merge-request → gitlab
- Testing against experiment code
- Review and merge
- Creating new release

Code Integration

In the ideal world development would look like

- Common understanding on new component → developers meeting
- Creating/updating JIRA ticket → not always done
- Writing tests → not well documented
- Implementing it → limited to SL6 and CC7 !
- Local testing → OK
- Submit merge-request → gitlab
- Testing against experiment code → incomplete expert operation
- Review and merge
- Creating new release

Code Integration

In the ideal world development would look like

- Common understanding on new component → developers meeting
- Creating/updating JIRA ticket → not always done
- Writing tests → not well documented
- Implementing it → limited to SL6 and CC7 !
- Local testing → OK
- Submit merge-request → gitlab
- Testing against experiment code → incomplete expert operation
- Review and merge → sometimes delayed
- Creating new release

Code Integration

In the ideal world development would look like

- Common understanding on new component → developers meeting
- Creating/updating JIRA ticket → not always done
- Writing tests → not well documented
- Implementing it → limited to SL6 and CC7 !
- Local testing → OK
- Submit merge-request → gitlab
- Testing against experiment code → incomplete expert operation
- Review and merge → sometimes delayed
- Creating new release → ad-hoc expert operation

Code Integration

In the ideal world development would look like

- Common understanding on new component → developers meeting
- Creating/updating JIRA ticket → not always done
- Writing tests → not well documented
- Implementing it → limited to SL6 and CC7 !
- Local testing → OK
- Submit merge-request → gitlab
- Testing against experiment code → incomplete expert operation
- Review and merge → sometimes delayed
- Creating new release → ad-hoc expert operation

Quite some potential for improvement!
