

# Status and prospects for precision electroweak calculations

*Tuesday, 30 May 2017 09:10 (20 minutes)*

The high precision program of future  $e^+e^-$  colliders, such as CEPC, FCC-ee and ILC, will be very challenging for the needed accuracy in theoretical predictions. The present status and future prospects on the Z pole observables and the thresholds for  $WW$ ,  $ZH$  and  $t\bar{t}$  production are reviewed.
