EGEE'09 - Uniting our strengths to realise a sustainable European grid

Monday, 21 September 2009 - Friday, 25 September 2009

Hotel Barcelo Sants

Scientific Programme

Call for Participation at EGEE09 - Sessions

EGEE09 marks the end of the EGEE series of projects and the start of the EGI. As part of this transition we are soliciting participation from the European e-infrastructure community, including the EGEE project, its collaborators and related organisations, for sessions around the conference theme – 'Uniting our strengths to realise the sustainable European grid'.

Session proposals are welcomed from all aspects of the e-infrastructure community including:

issues of general interest to either the application, operations or software development community,

issues relating to the upcoming transition to EGI,

from activities within the EGEE project (either for internal meetings or meetings between activities), and

to build collaborations between EGEE and other projects

session proposals that do not directly fall within these areas are still welcomed.

Commercial and academic organisations wishing to book an exhibition space, which can be used for your own dedicated demonstrations, should contact kristina.gunne@cern.ch for details.

End Users (Applications)

The use of e-infrastructure by the application, end-user or research community

Operations

Tools, portals and services aimed at those providing the operational e-infrastructures

Software

Work from developers relating to services and tools that either exposes elements of e-infrastructure or builds upon existing interfaces to improve usability and access

EGI Related (Transition)

Work dedicated to discussing how e-infrastructures (including EGEE) plan to transition towards EGI

EGEE

Work dedicated to a single or cross-activity activity

Security

Work relating to activities concerning security.

Collaborative Workshop / Tutorial

Workshops and tutorials given booth by the EGEE project and Collaborating projects.
