

Plenary Discussion

**Who Are We, Who Could We Be and
Who Do We Want to Be?**

We Feel the Need To...

Share experience, knowledge via other means besides giving presentations

The goal was to stimulate discussions and to brainstorm about specific pre-defined topics (not about facilities and related issues)

An Extract of Topics Discussed

The need of comparability and who are we? (further discussed on Thursday)

How to combine MP and RAMI aspects?

Predictive methods/Early fault detection methods (further discussed on Thursday)

How can we share our experience and knowledge?

- Confluence at ESS: provides basic means to share information
- ARIES: Project to develop an “Accelerator Reliability Information System”

Conclusion

The audience was very open minded and discussions were super dynamic! This was absolutely great and we thank you very very much!

The idea is to summarise and document the Monday and Thursday sessions.

The next step is to start working on a “Handbook”/”Collection of Best Practices”.

Let's Discuss More!
