

# Ao Xu

Ao comes from China. He was born in Henan Province, which is the birthplace of Chinese civilization. He studies Physics at Tsinghua University in Beijing since 2013 and will start his fourth year as an undergraduate this autumn. By attending academic lectures and group meetings of LHCb China group, he becomes

highly interested in particle physics, especially experimental high energy physics. He started his first physics analysis on the measurement of  $J/\psi$  production cross-section in pp collisions

at 2.76 TeV this spring.

Now he is a summer student of EP-ULB Department at CERN. His project focuses on the search for the doubly charmed baryon at LHCb.

He plans to continue his study of high energy physics as a PhD student after graduation"
