Search for direct production of charginos and neutralinos with the ATLAS detector

Tuesday 4 April 2017 17:00 (15 minutes)

Many supersymmetry models feature gauginos and also sleptons with masses less than a few hundred GeV. These can give rise to direct pair production rates at the LHC that can be observed in the data sample recorded by the ATLAS detector. The talk presents recent results of searches for chargino and neutralino direct production in final states with leptons using LHC Run 2 data.
