- Suppressed by a factor of $\sim |p_T|^2$ w.r.t the Collins and Sivers TSAs

$$A_{LT}^{\cos(\phi_h - \phi_S)} \propto g_{1T}^q \otimes D_{1q}^h \text{ DSA [twist-2]}$$

- Not accessible in single-polarized DY
- Gives access to g_{1T} “twist-2” PDF (Kotzinian-Mulders or worm-gear-T)
- Clear signal for h^+ (*preliminary* confirmation also by HERMES)
- In agreement with several models

The $A_{UT}^{\sin\phi_S}$ asymmetry

Conclusions

- During phase I COMPASS has measured all possible SIDIS azimuthal LSAs and TSAs.
 - COMPASS has measured SIDIS proton TSAs at Drell-Yan mass-ranges
 - The Sivers and Collins SIDIS-TSAs are measured to be non-zero at high-mass range [CERN-EP-2016-250](#), [arXiv:1609.07374 \[hep-ex\]](#)
- In 2015 COMPASS has successfully collected **first ever polarized DY data** becoming the first experiment to measure both SIDIS and DY TSAs and giving a unique opportunity to compare the TMD PDFs obtained from two processes [CERN-EP-2017-059](#), [arXiv:1704.00488\[hep-ex\]](#)
 - Sivers asymmetry is found to be above zero at about one s.d.
 - **1st measurement of the DY Sivers asymmetry is consistent with the predicted change of sign for the Sivers function**
 - Transversity asymmetry is found to be below zero at about two s.d.
 - **A second year of polarized DY data-taking will take place in 2018**
- **COMPASS phase-III is being discussed to take place after 2020**
 - Particular attention is given to possible SIDIS and Drell-Yan measurements
