## Precision constraints on the top-quark effective field theory at future lepton colliders

*Wednesday, 5 April 2017 14:20 (20 minutes)*

We examine the constraints that future lepton colliders would impose on the top-quark effective field theory. All top-quark operators are simultaneously included and their effects are computed at next-to-leading order in QCD, in the MadGraph\_aMC@NLO framework, including off-shell top effects.
