

# Interlock logic for the laser emittance meter (BMLEM) at Linac4

Thomas Hofmann  
MPP, 16 September 2016

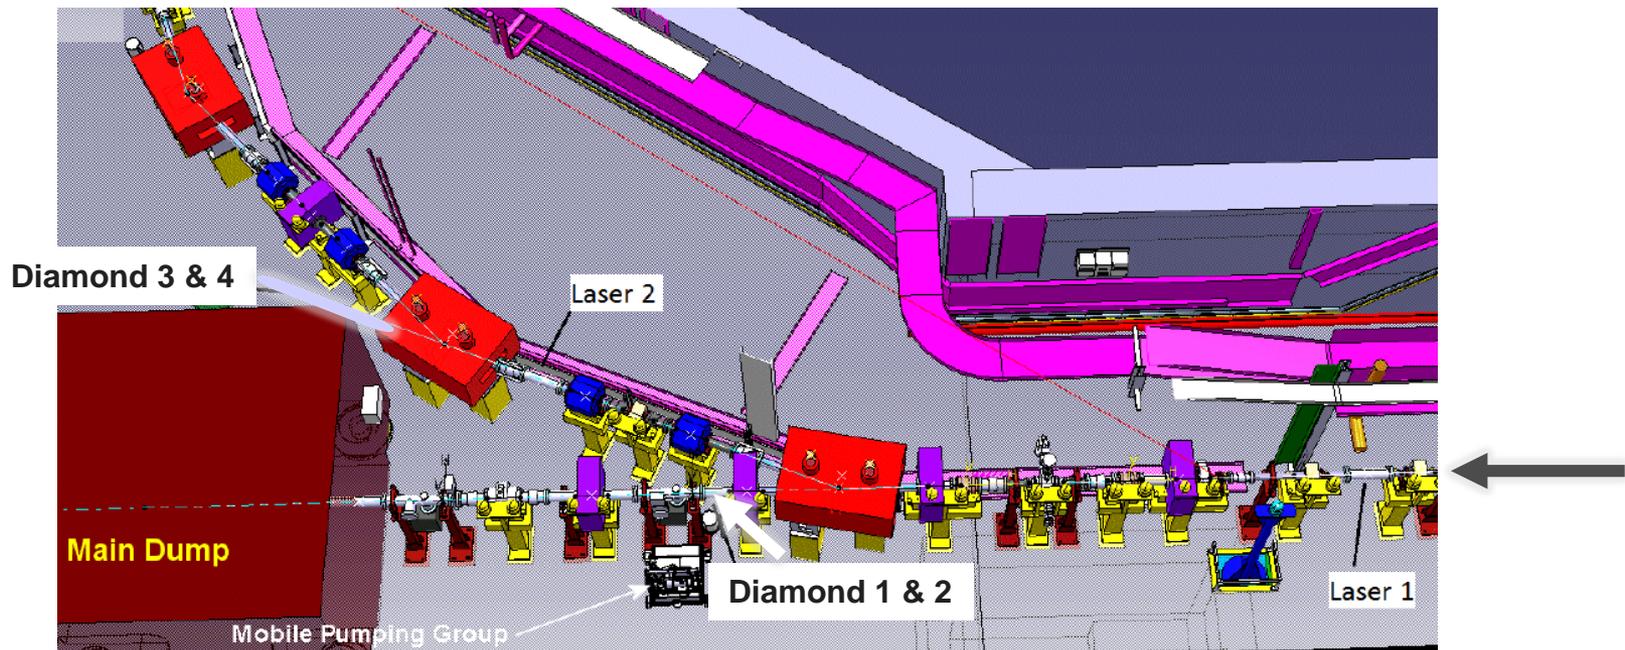

# Concept of laser emittance meter (BMLEM)

# Layout: Laser Emittance Meter

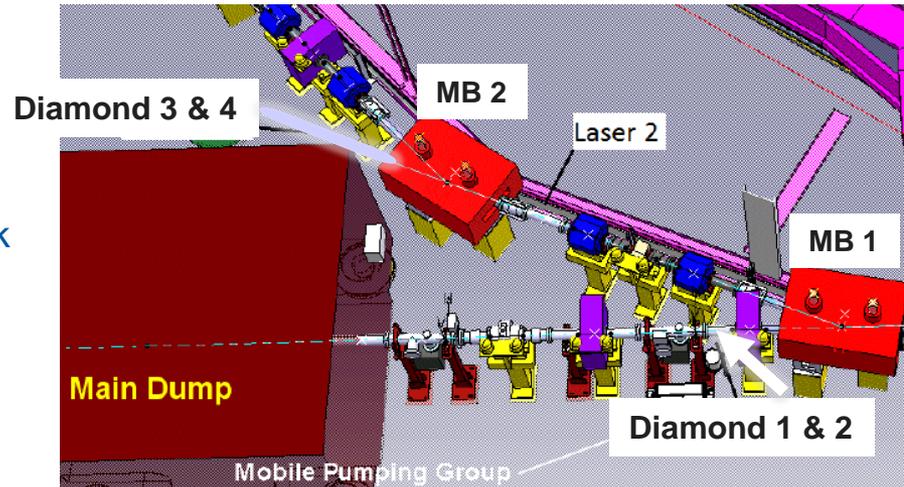

2 Laser Emittance systems, each of them consisting of

- Laser station
- 2 Diamond detectors on actuators  
(downstream few meters, after bending dipole)

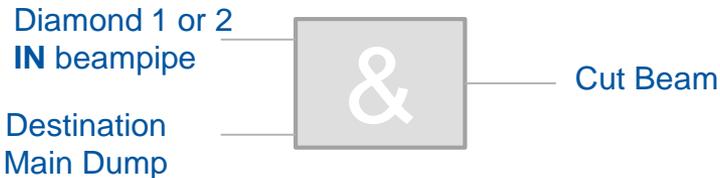

# Interlock functionality for Diamonds

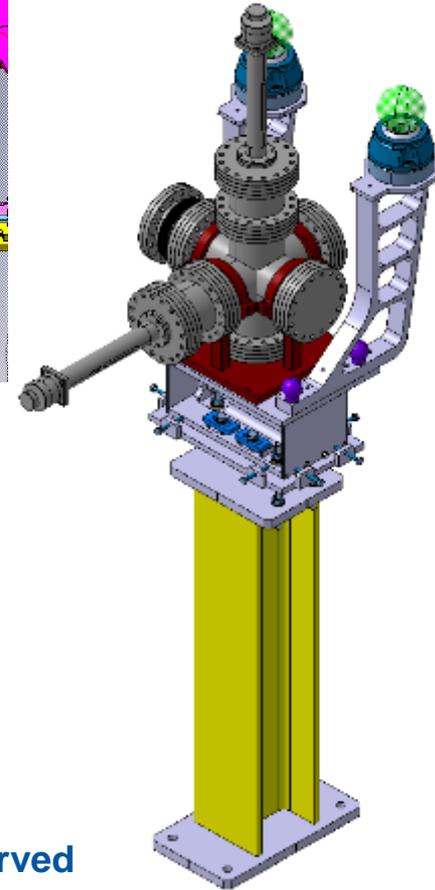

- Diamond 3 & 4:
  - **No interlock needed,**
  - secured by interlock of main bend

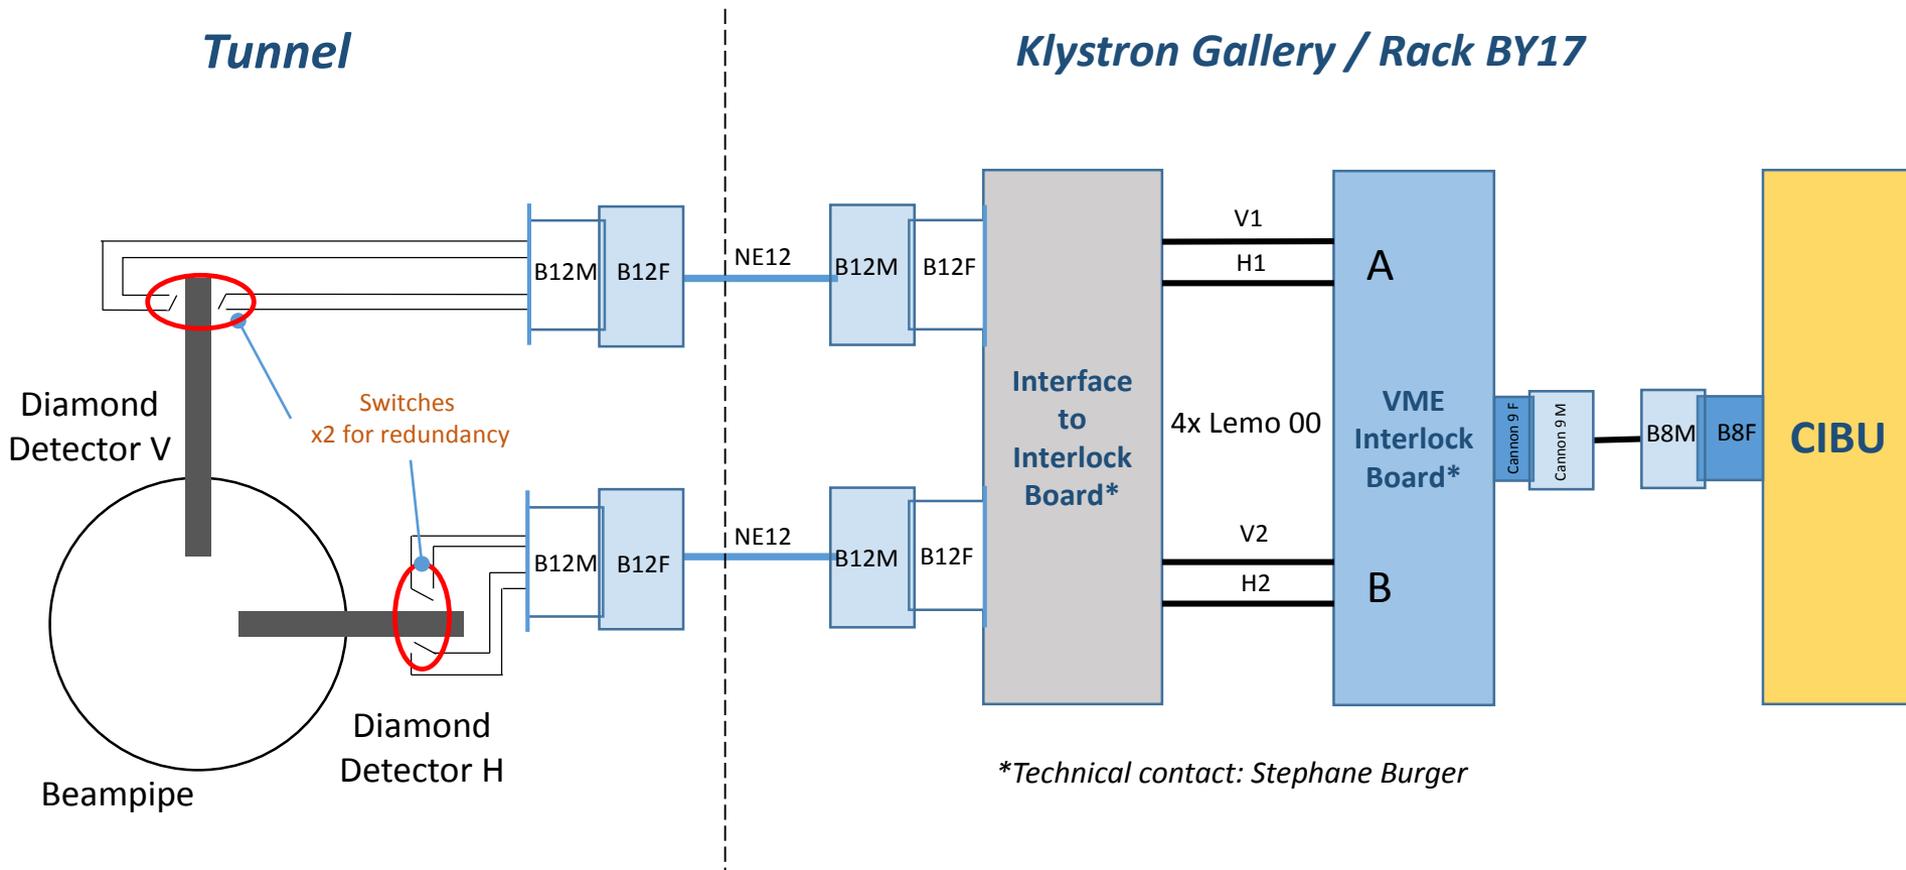

- Diamond 1 & 2:
  - **Hardware interlock needed**
  - Logic:

- **Additional input for positions of diamond detectors in BIC L4Z reserved**  
(Ref: A. Apollonio)

# Position Monitoring Diamond Detectors

*\*Technical contact: Stephane Burger*

# Status

- Laser Emittance Meter will be installed in first half of 2017
- To be done for interlock system:
  - Acquisition electronics developed by S. Burger
  - DIC for required cables in preparation
  - Validation planned after installation (4/2017)
