Problems to Overcome: Implementation Experience at CERN

Sunday 11 October 2009 14:15 (30 minutes)

This presentations will detail the problems during the implementation of security measures for CERN control systems. The presentation will first focus on the evolution of CERN security in the past years and discuss some security incidents related with control systems. Based on the current status, the most problematic areas in terms of user friedliness and useablity will be discussed, and potential future directions will be presented.
