## OpenDOAR Policy tools and applications

*Wednesday 18 April 2007 15:40 (30 minutes)*

OpenDOAR conducted a survey of the world's repositories that showed 2/3 as having unusable or missing policies for content re-use and other issues. Such policies are essential for service providers to be able to develop innovative services that use the full potential of open access. OpenDOAR has developed a set of policy generator tools for repository administrators and is contacting administrators to advocate policy development. It is hoped that one outcome from this work will be some standardisation of policies in vocabulary and intent. Other developments include an OpenDOAR API. This presentation looks at the way that the tools and API have been developed and the implications for their use.
