## CKM angle $\gamma$

Matthew Kenzie <sup>1</sup>, Alison Tully <sup>1</sup>, Florian Bernlochner <sup>2</sup>

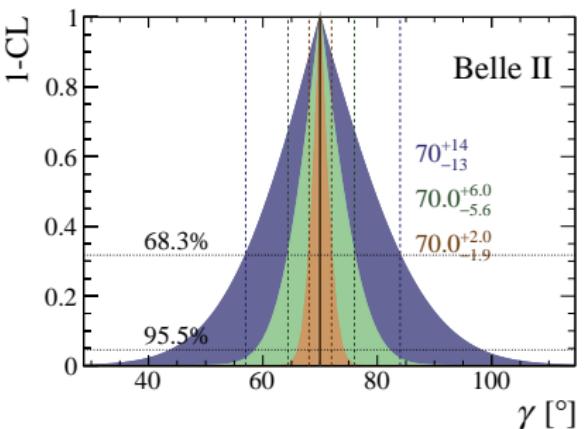

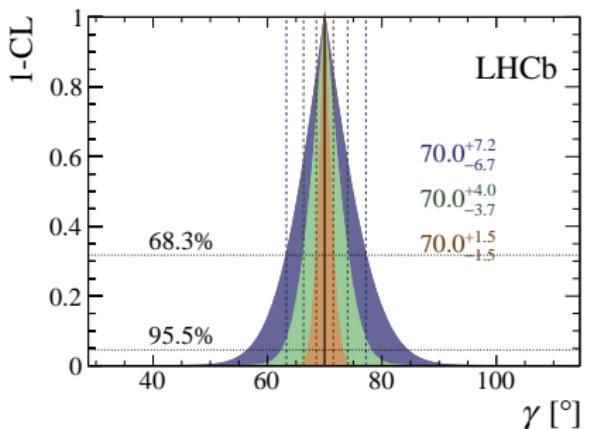

<sup>1</sup>University of Cambridge, <sup>2</sup>University of Bonn

October 10, 2016

# Introduction

- ▶ Use  $\gamma$  combo package: <https://github.com/gammacombo/gammacombo>
- ▶ Have several subpackages corresponding to different combinations:
  - ▶ In this case it is also called gammacombo: <https://gitlab.cern.ch/gammacombo/gammacombo>
- ▶ Essentially a frequentist combination package (also used by Alison for RH currents,  $V_{ub}/V_{cb}$ ,  $R(D)$ ,  $R(D^*)$ )
- ▶ Compare Belle (now) with predictions for Belle II ( $5 \text{ ab}^{-1}$ ) and Belle II ( $50 \text{ ab}^{-1}$ ) alongside LHCb (now) and predictions for LHCb ( $10 \text{ fb}^{-1}$ ) and LHCb ( $22 \text{ fb}^{-1}$ )

## Progression by experiment

# Summary by year
