

# Survey of neutrino-nucleus cross-section measurements from MINERvA

*Tuesday 30 May 2017 17:50 (20 minutes)*

Precision measurements of neutrino oscillation probabilities require an improved understanding of neutrino-nucleus interactions. MINERvA is a neutrino scattering experiment at Fermilab that utilizes the intense neutrino beam from the NuMI beam-line and a finely segmented scintillator based tracking detector to measure neutrino cross sections on various nuclear targets. MINERvA has published results using its low-energy data sets and is presently taking NOvA-era medium energy data. These results cover both exclusive and inclusive channels for muon and electron neutrino and anti-neutrino interactions. A summary of recent results from MINERvA will be presented.

## Author's Name

Vittorio Paolone

## Author's Institute

University of Pittsburgh

## Author's e-mail

vittorio.paolone@cern.ch

## Abstract Title

Survey of neutrino-nucleus cross-section measurements from MINERvA

## Subject

Neutrinos

**Author:** PAOLONE, Vittorio (University of Pittsburgh)

**Presenter:** PAOLONE, Vittorio (University of Pittsburgh)

**Session Classification:** Parallel Session Neutrinos
