PILOT UPDATE

PanDA Pilot v 66.2

- Main changes
 - Proper handling of DBRelease files (previously new site movers staged in DBRelease files even though they were available on CVMFS)
 - To be investigated: is it possible for TRF:s to read DBRelease files directly from CVMFS?
 - Special info tag in PilotID identifier to track if new site mover workflow is active [not implemented yet]
 - Rucio request: tracing update for eventType identifier for OS
- Contributions from A. Anisenkov, W. Guan
- Release ASAP (pending PilotID fix)
