

Maintainable CSS with visual regression testing and functional CSS

Monday 13 February 2017 16:35 (30 minutes)

Maintaining CSS is hard. Once your CSS files grows big, they become full of duplicated rules and unused code.

What can we do to solve this problem?

In this talk I will describe two concepts that can help us writing maintainable CSS:

- Visual regression tests that can help us refactor our CSS with confidence
- Functional CSS - a different way of writing CSS that can help us produce more maintainable code in the long term
