

Flexbox: The yoga of CSS

Wednesday 15 February 2017 16:35 (1 hour)

We will introduce flexbox, the single most valuable feature in CSS3 for elegantly solving page layout, vertical alignment, and many other typical nuances in web design. Now that flexbox is fully supported by all* browsers we at Indico are embracing its wonders to make our lives simpler and our CSS more predictable. We will share with you our findings, use cases, and examples, and, if you are down for some yoga, in the hands-on workshop you will learn how to use flexbox as we explore its different options.
