Top quark pair and single top differential cross sections in CMS

Thursday 11 July 2019 12:15 (15 minutes)

Differential measurements of top quark pair and single top quark production cross sections are presented using data collected by CMS. The cross sections are measured as a function of various kinematic observables of the top quarks and the jets and leptons of the event final state. The results are confronted with precise theory calculations. Multidifferential $t\bar{t}$ cross sections are presented and used to constrain simultaneously the top quark pole mass, α_s , and PDFs.
