# Effective Field Theory

- ▶ We saw no evidence of new physics yet
- ▶ Can new physics live at energies **beyond the LHC reach** ?
- ▶ Think **w i d e** !
- ▶ **Interpret** the effects of new physics at higher energies with an **extended SM effective field theory (SMEFT)** applicable within the LHC reach

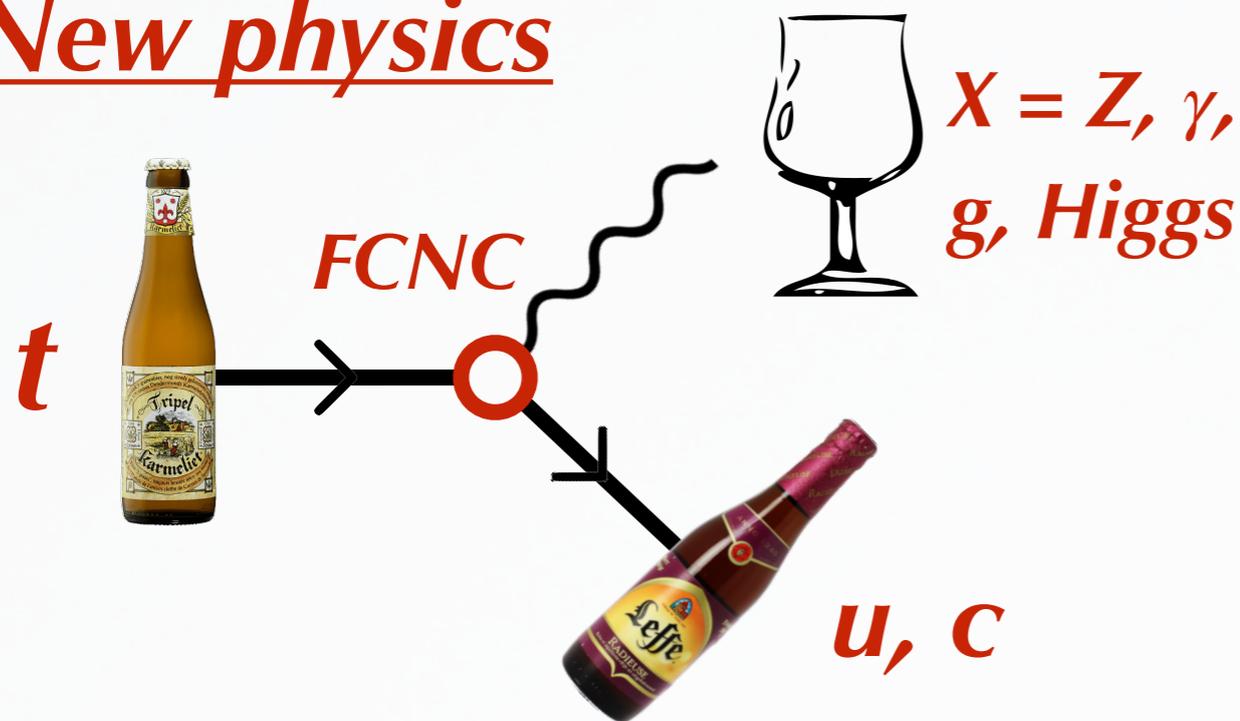

$$\mathcal{L} = \mathcal{L}_{SM} + \sum_i \left( \frac{C_i}{\Lambda^2} O_i^{(6)} \right)$$

# Flavour-Changing Neutral Currents

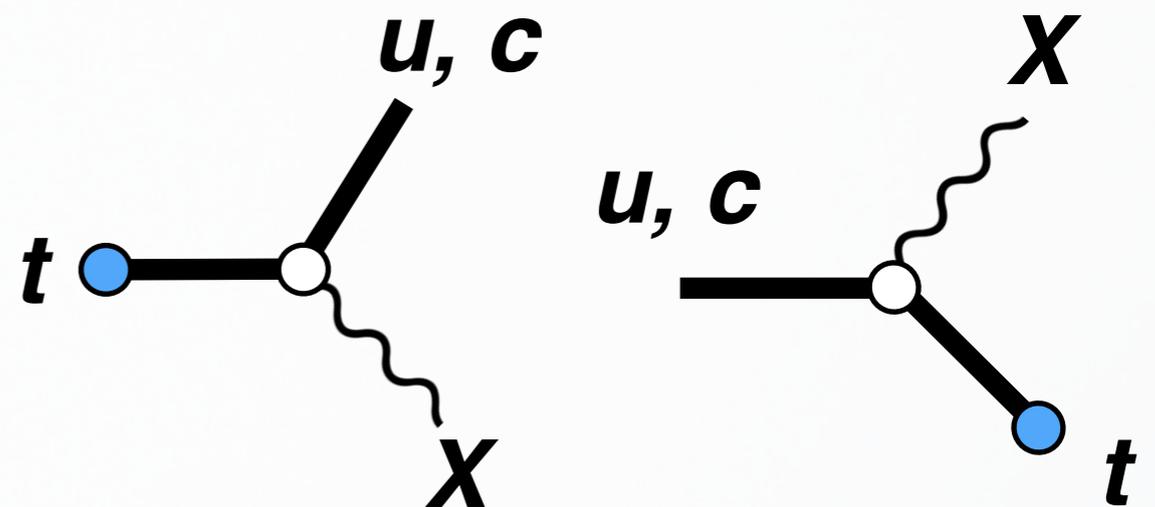

## New physics

## SM

- ▶ **Forbidden** at tree level and heavily suppressed at higher orders in **SM** by GIM mechanism
- ▶ Many new physics models allow **FCNC** processes
- ▶ Searches in *top decays* and *single top+X production*
- ▶ Interpretations via **anomalous** couplings and **SMEFT** framework

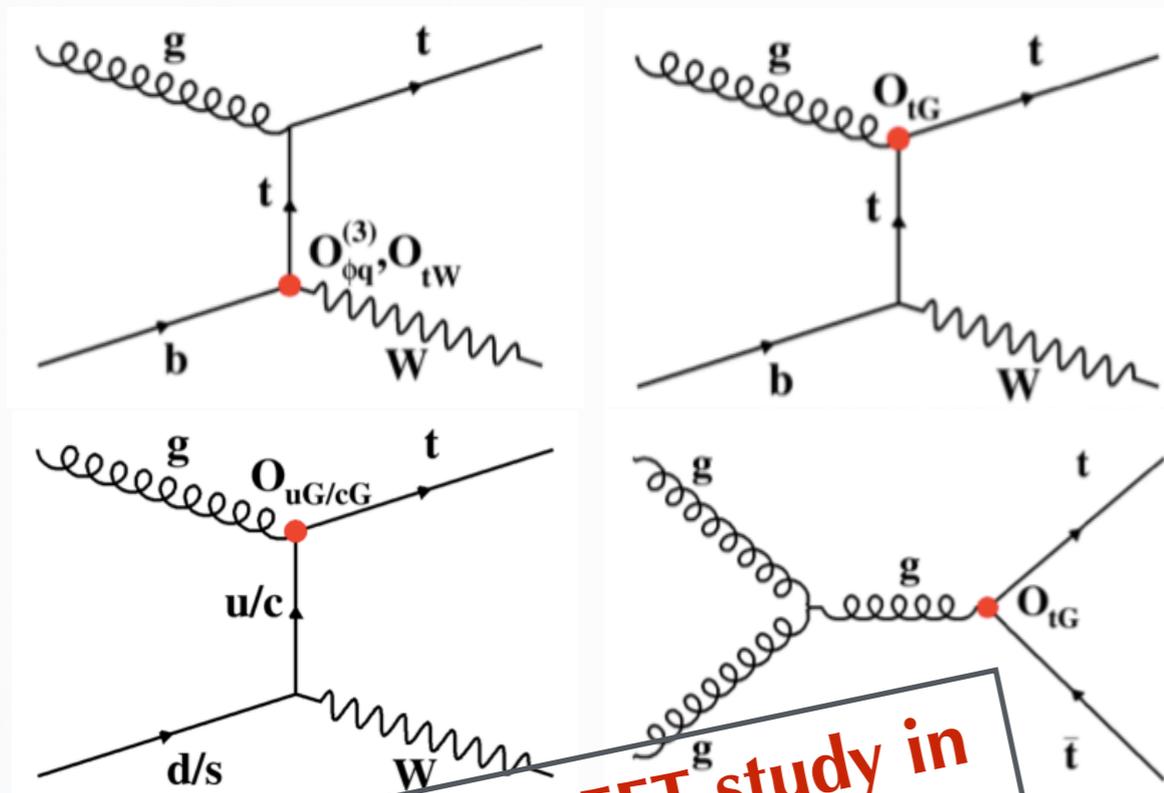

# EFT in dilepton events with top quarks

**Factor of  $\approx 2$  improvement in the constraints on several two-fermion FCNC operators**

# Conclusion

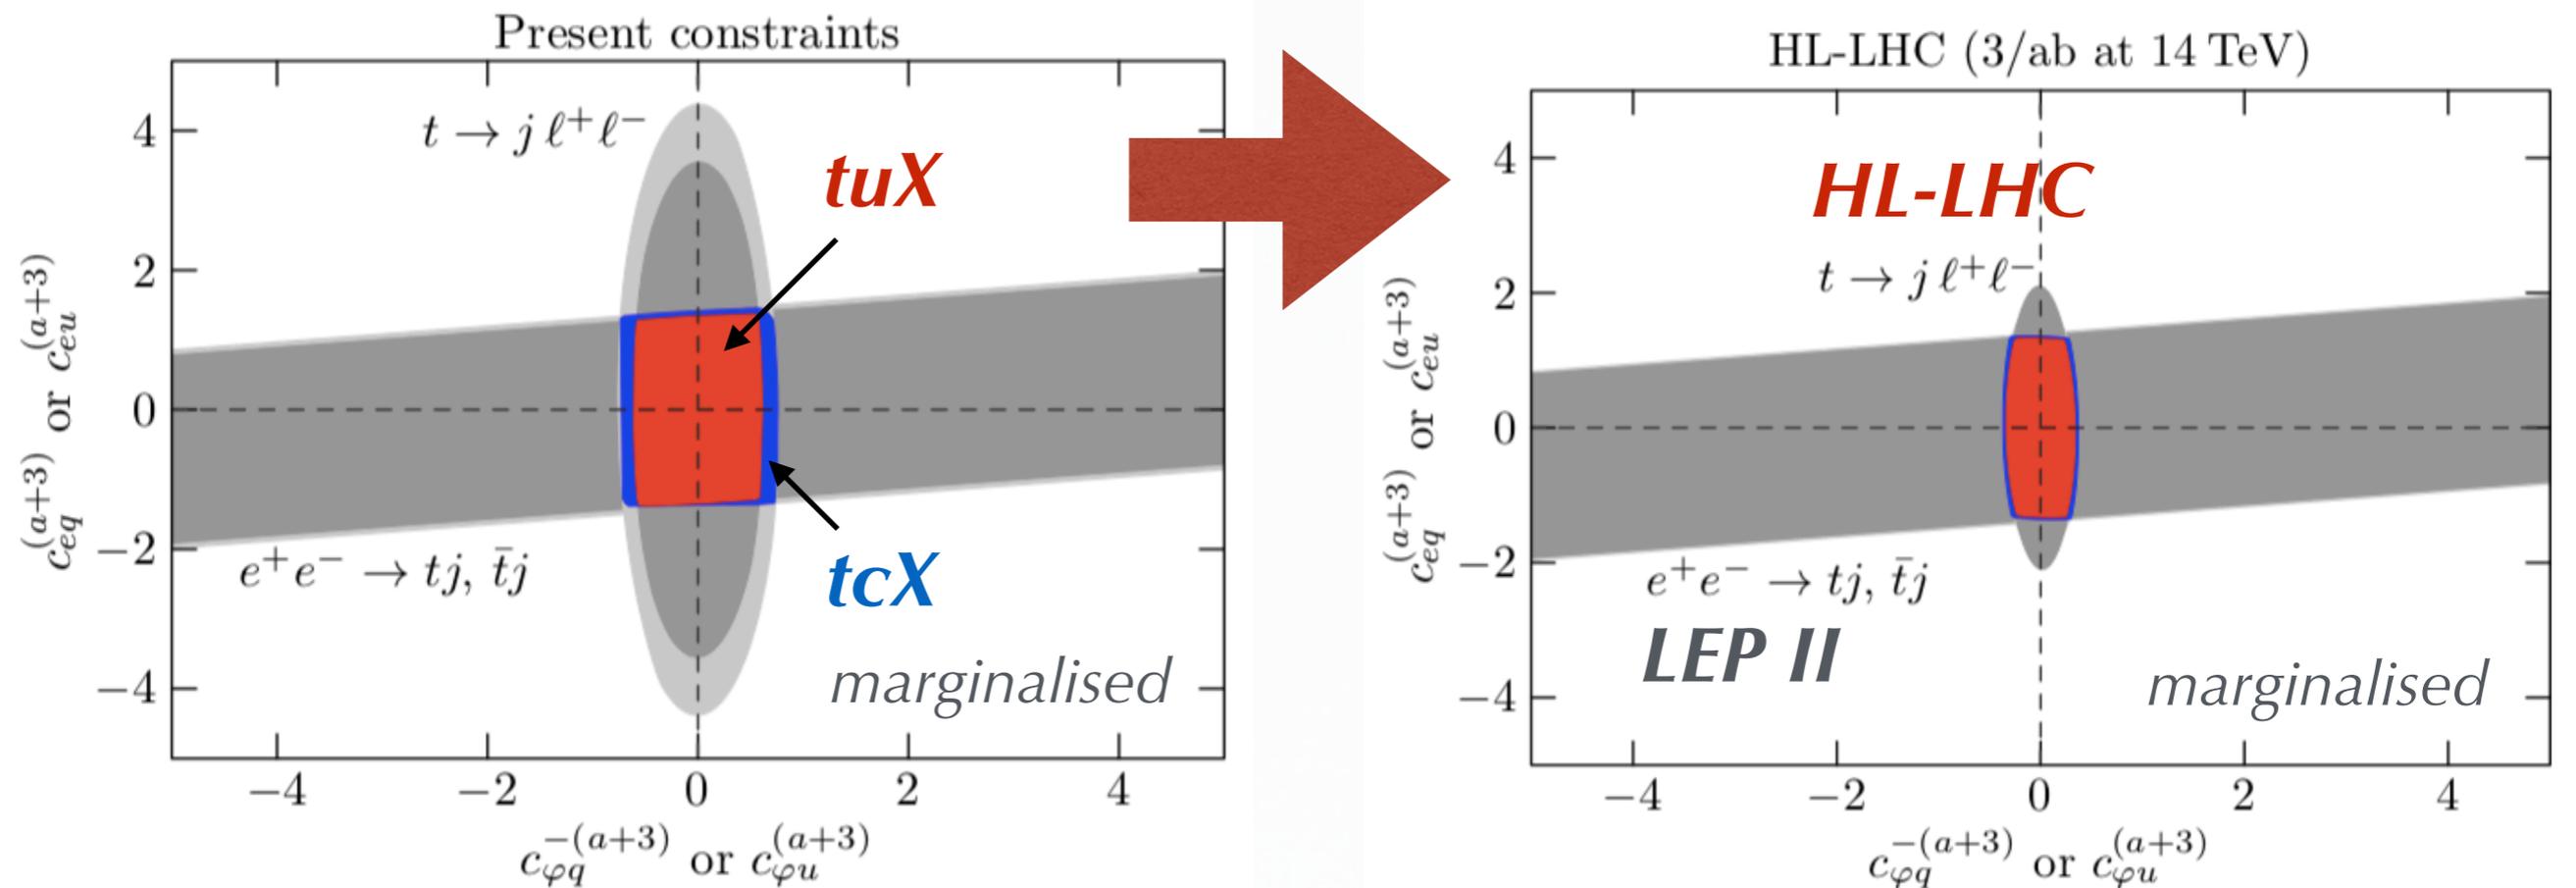

- Interpretation of the LHC experimental results in the **EFT** framework represents an important *LHC legacy result* for many years to come
- Presented several first **EFT** results for some very rare processes with top quarks
- Search for **FCNC** continues with setting strong limits
- Recent highlights from CMS:
  - **Comprehensive EFT interpretations from new ttZ differential cross section measurement and studies of the ttV production**
  - **First NLO EFT in the study of the tW process**
  - **Hunt for 4 top production in progress with probing four-fermion EFT operators**
  - **Good prospects for future EFT and FCNC studies at HL-LHC**
- Interpretations go easy with Belgian beer!

# Study of $ttV$ production

36 fb<sup>-1</sup>, 13 TeV

JHEP 08 (2018) 011

- Sensitive to **electroweak couplings** of the top quark
- Important background to  $ttH$
- Prompt: WW, WZ  
Z+jets,  $t\bar{t}$ bar  
(only in dilepton OS)
- Non-prompt: Z+jets,  $t\bar{t}$ bar  
(except dilepton OS)
- $ttW$  measured in dilepton SS
- $ttZ$  extracted from trilepton and 4-lepton

14% precision
