Searches for new resonances decaying to leptons, photons or jets with CMS

Thursday, July 11, 2019 3:45 PM (15 minutes)

Various physics models beyond the standard model predict new particles that decay to leptons, photons or jets. This talk presents the status of CMS searches for new resonances decaying to a pair of leptons, photons or jets, as well as other states such as lepton + missing transverse momentum. Searches for boosted dijet resonances recoiling against some high p_T initial state radiation, as well as searches using dijet angular distributions are also covered.
