Impact of Varying Acceleration to the Performance of Stirling-Type Pulse Tube Cryocooler

Wednesday, 12 July 2017 09:00 (2 hours)

Stirling-Type Pulse Tube Cryocooler is widely used in Aerocrafts which are often faced with changing acceleration. While the performance of the cryocooler will decay at the circumstance. Experiments find that both the cryogen's temperature field in the cold finger and the Compressor's piston gap are affected by variable acceleration. A model is made for analyzing the changing of their performance whose result matches the experiment. The experiments is a reference to future cryocooler design. And give a way to control the performance by adding a certain power of compressor.

Primary authors: LI, Jinze (CAS TPIC); Dr XUN, Yuqiang; Prof. HONG, Guotong (Technical Institute of Physics and Chemistry of the Chinese Academy of Sciences)

Presenter: LI, Jinze (CAS TPIC)

Session Classification: C3PoA - Pulse Tube Cryocoolers (Aerospace)
