

Recent results on exotics states at Belle

Tuesday 26 September 2017 20:45 (15 minutes)

A new alternate $\chi_{c0}(2P)$ charmonium state, $X^*(3860)$, has been observed with a significance of 6.5σ using full amplitude analysis of the process $e^+e^- \rightarrow J/\psi D \bar{D}$. We also perform search for exotic states such as hidden-strangeness penta-quark. All the results presented here exploits the full data set of Belle.
