

# Regge phenomenology and the nature of the $\Lambda(1405)$ resonance

*Monday 25 September 2017 15:35 (20 minutes)*

We use Regge phenomenology and the structure of the hyperon ( $\Lambda$  and  $\Sigma$ ) spectrum to gain insight on the nature of the two  $\Lambda(1405)$  resonances. We find that only of these resonances is compatible with a three-quark state.
