

AOB – CIBDS

Delay to apply to the Asynchronous path

Stéphane Gabourin
TE/MPE

MPP – 11th November 2016

Reminder

- New version of CIBDS (V5) will keep its User Permits with separate logic
- Different behaviour in case only 1 User Permit is set to FALSE during operation
- Synchronous paths have longer delays for half of the loops
- These delays exceed the one for the Asynchronous path

Delay paths
