Beam Structure

- Beam consists of bunch trains
- 2625 bunches per train
- 2×10^{10} particles per bunch
- Bunch spacings: 369 ns
- Time between trains: ~ 199 ms
- Train length: ~ 1 ms

Drift velocities:

$$v_{\text{ions}} = 3,7 \frac{\text{mm}}{\text{ms}}$$

$$v_{e^-} = 44,8 \frac{\text{mm}}{\mu\text{s}}$$

Drift times:

$$t_{\text{ions}} = 532,4 \text{ ms} \\ \hat{=} 2,7 \text{ BT}$$

$$t_{e^-} = 43,9 \mu\text{s} \\ \hat{=} 119 \text{ BX}$$

Gas: TDR (Ar 93%, CH₄%, CO₂ 2%)

Drift field: $|E| = 240 \text{ V/cm}$

Drift velocities:

$$v_{\text{ions}} = 3,7 \frac{\text{mm}}{\text{ms}}$$

$$v_{e^-} = 44,8 \frac{\text{mm}}{\mu\text{s}}$$

Drift times:

$$t_{\text{ions}} = 532,4 \text{ ms} \\ \hat{=} 2,7 \text{ BT}$$

$$t_{e^-} = 43,9 \mu\text{s} \\ \hat{=} 119 \text{ BX}$$

Gas: TDR (Ar 93%, CH₄%, CO₂ 2%)

Drift field: $|E| = 240 \text{ V/cm}$

Drift velocities:

$$v_{\text{ions}} = 3,7 \frac{\text{mm}}{\text{ms}}$$

$$v_{e^-} = 44,8 \frac{\text{mm}}{\mu\text{s}}$$

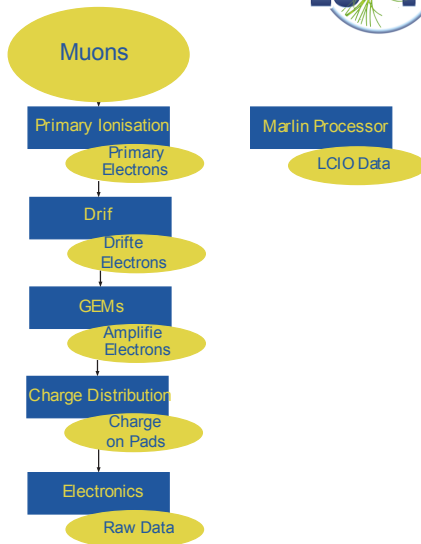

Drift times:

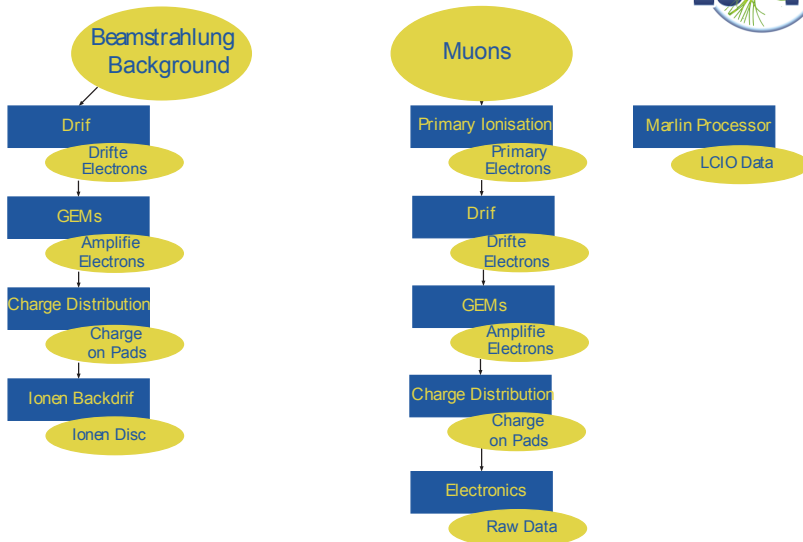

$$t_{\text{ions}} = 532,4 \text{ ms} \\ \hat{=} 2,7 \text{ BT}$$

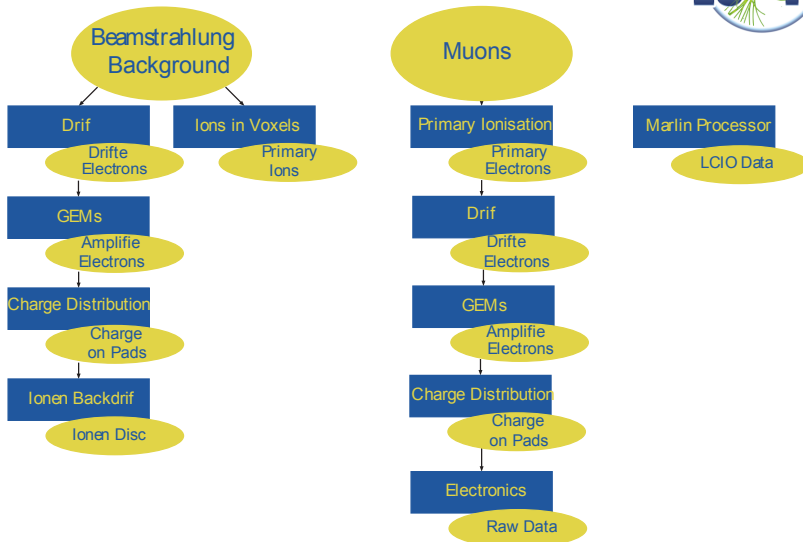

$$t_{e^-} = 43,9 \mu\text{s} \\ \hat{=} 119 \text{ BX}$$

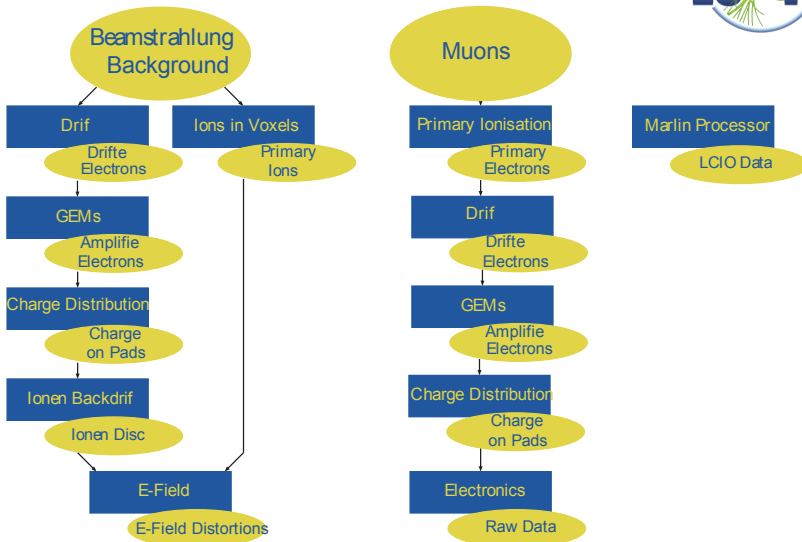

Gas: TDR (Ar 93%, CH₄%, CO₂ 2%)

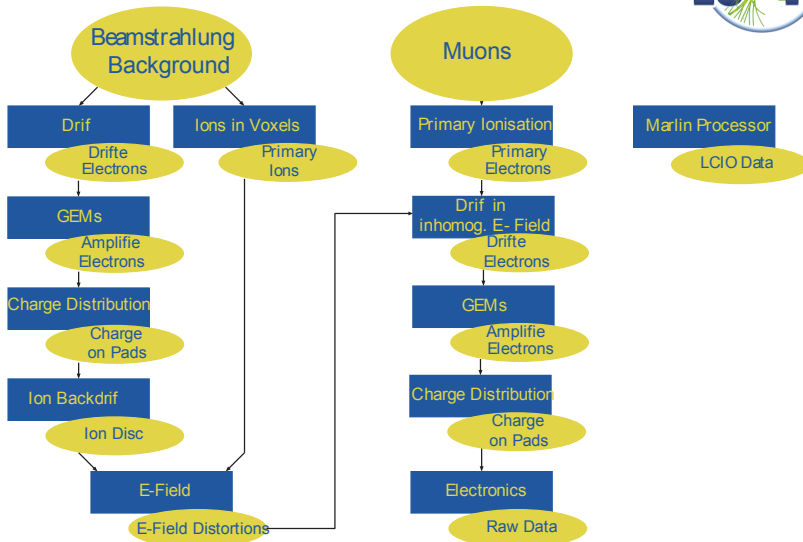

Drift field: $|E| = 240 \text{ V/cm}$

110 Bunch Crossings

115 Bunch Crossings

120 Bunch Crossings

2750 Bunch Crossings

500 Bunch Crossings

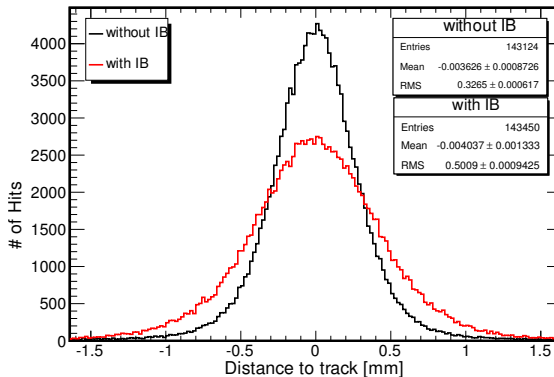

1000 Bunch Crossings

2750 Bunch Crossings

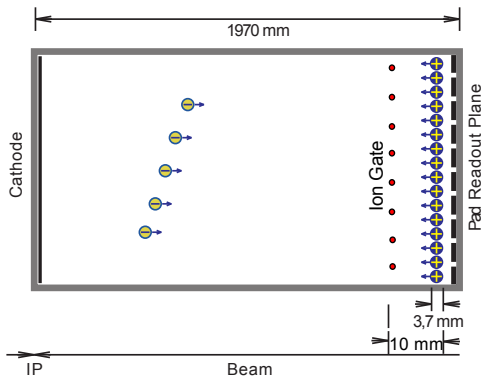

- Drift field:
 $|E| = 240 \text{ V/cm}$
- Field distortions:
 $\Delta E \leq 20 \%$
- Change on drift velocity
 $\Delta v_{e^-} \leq 1 \frac{\text{mm}}{\mu\text{s}}$

Spatial Resolution

Significantly reduced spatial resolution
for high gas gain (~ 20.000)

- Gating only between bunch trains
- Additional ion discs in the volume can be suppressed
- > 98 % optical transparency

- Field distortions only near the wires (≈ 3 radii)
- Terminates the drift field
- Shields the electric charges near the readout

Summary

- Influence of ion backdrift on spatial resolution can be simulated in detail
 - Locally high charge depositions
 - Significant field distortions
 - Spatial resolution degrades

Outlook

- Detailed Studies:
 - Different GEM settings
 - Impact on momentum resolution
- Simulation of several ion discs
- Influence of ion gate
