EOS as a filesystem

Thursday, 2 February 2017 14:55 (20 minutes)

During 2016 the usage and scope of EOS at CERN and outside has been evolving towards usage as a POSIX like filesystem. The presentation will highlight the current state and improvements done during the last year. We will introduce the next generation (reimplementation) of the FUSE client in EOS which might overcome most limitations and non POSIX behaviour adding dedicated server side support to handle leases and client cache management.
