

# ADC Weekly Group production

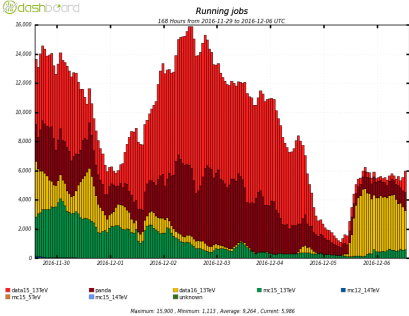

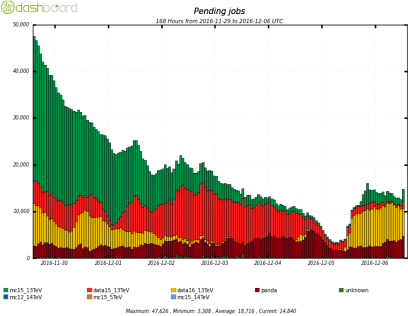

Benjamin Kaplan and Eirik Gramstad

`https://twiki.cern.ch/twiki/bin/view/AtlasProtected/DerivationProductionTeam`

December 6, 2016

1. Validation with 20.7.8.5
  - ▶ our validation cache for Dec. processing of derivations was built yesterday
  - ▶ validation tasks on data (310863) and MC (DSID 410000) were submitted 1h ago ([monitoring](#))
2. Clean-up of long running derivation jobs
  - ▶ finished, changed split level and retried many jobs last week
  - ▶ new jobs appear with the old split level settings
  - ▶ tempted to do a massive clean-up (i.e. to change split level) of all active jobs > 6 days old ( ~ 2000 tasks)
3. plan to have a new list of obsolescence ready before Christmas (for both data and MC)
