

Beta-beams for large θ_{13} ($\sin^2 2\theta_{13} > 0.01$)

Enforce the following limitations:

- I. NO SPS+ $\rightarrow \gamma \sim 100$
2. ONE BASELINE
3. MODERATE FLUXES: $10^{18} \div 10^{19}$

A. Donini, CSIC, IFT/UAM, Madrid

Option B: four ions, ${}^6\text{He}$, ${}^{18}\text{Ne}$, ${}^8\text{Li}$, ${}^8\text{B}$; $L=650$ Km

A.Donini, E. Fernandez-Martinez, hep-ph/0603261

A. Donini, CSIC, IFT/UAM, Madrid

Example: determine the mass hierarchy

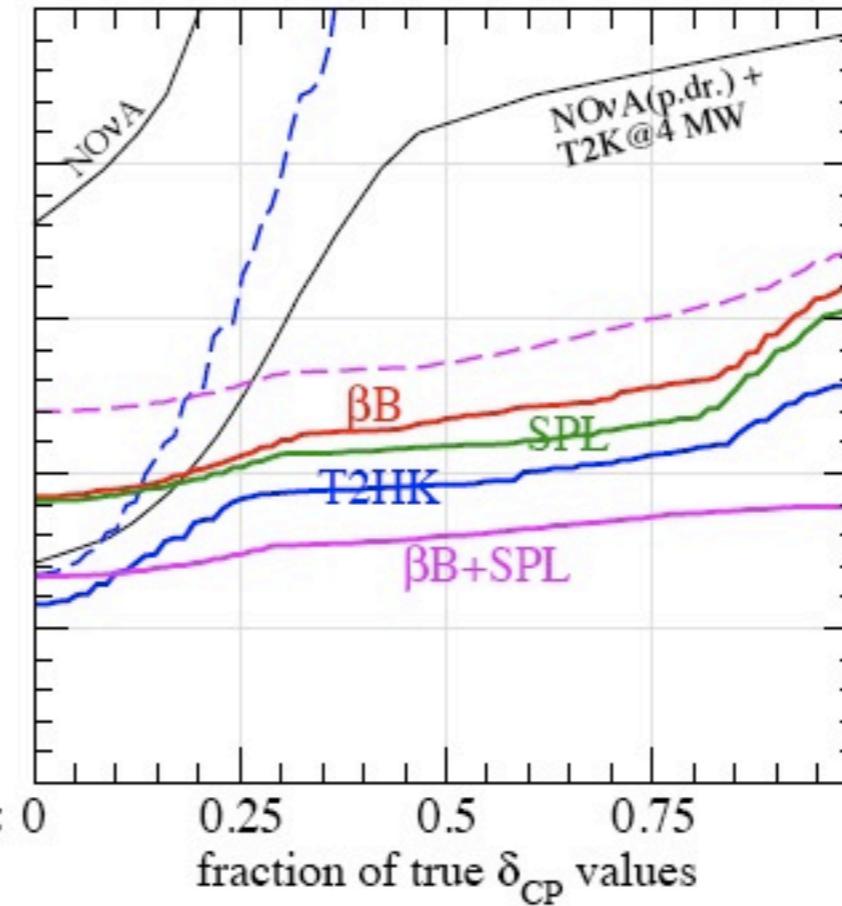

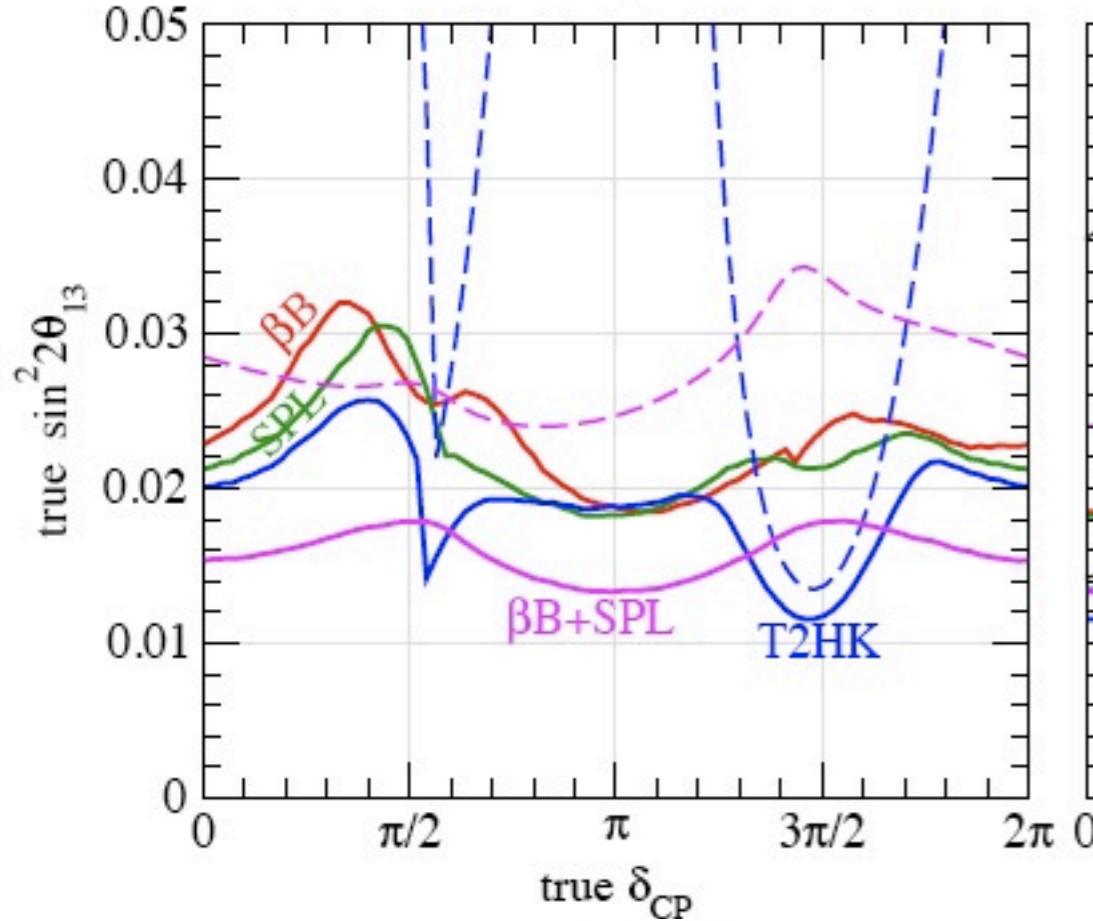

2 σ sensitivity to normal hierarchy from LBL + ATM data

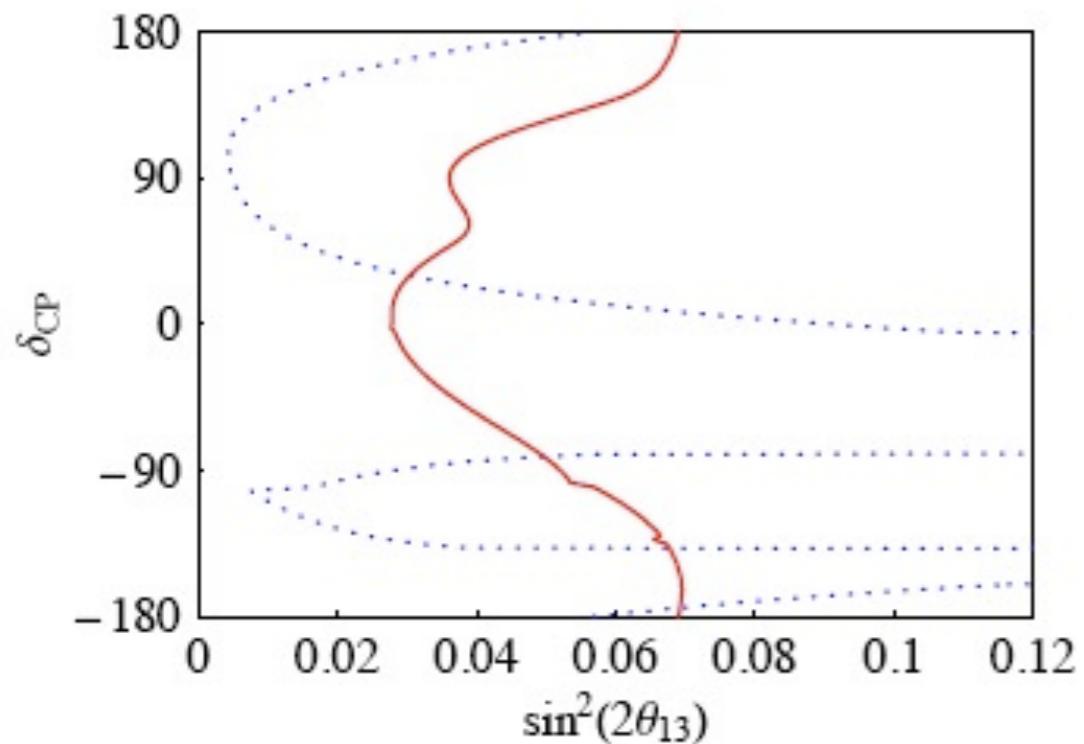

Option A

Example: determine the mass hierarchy

2 σ sensitivity to normal hierarchy from LBL + ATM data

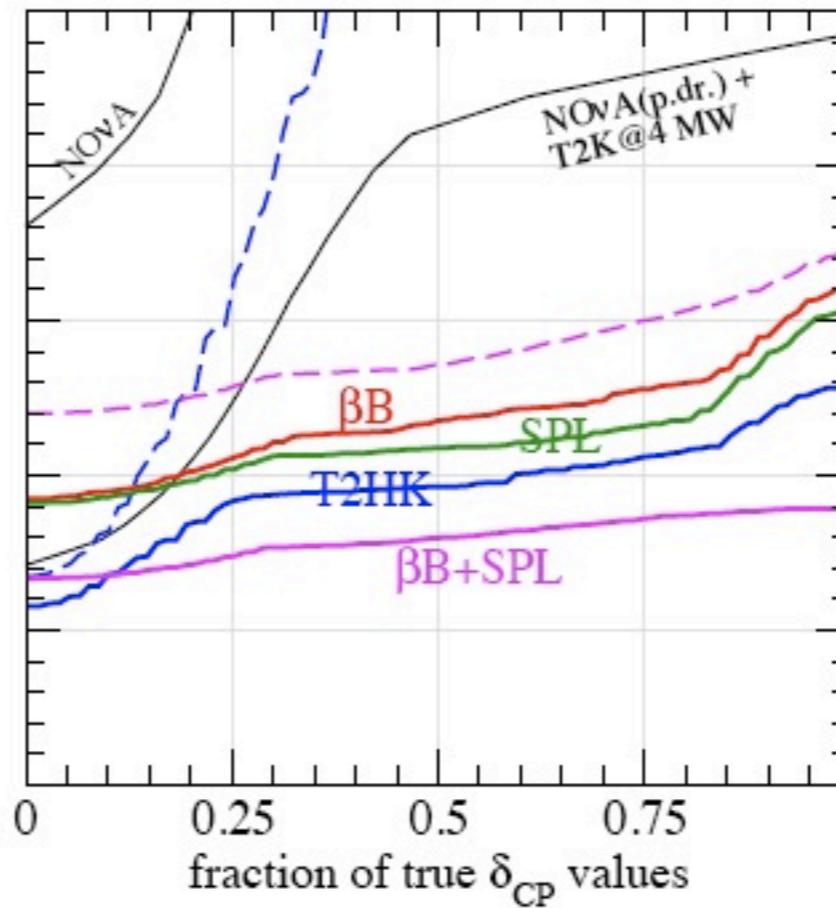

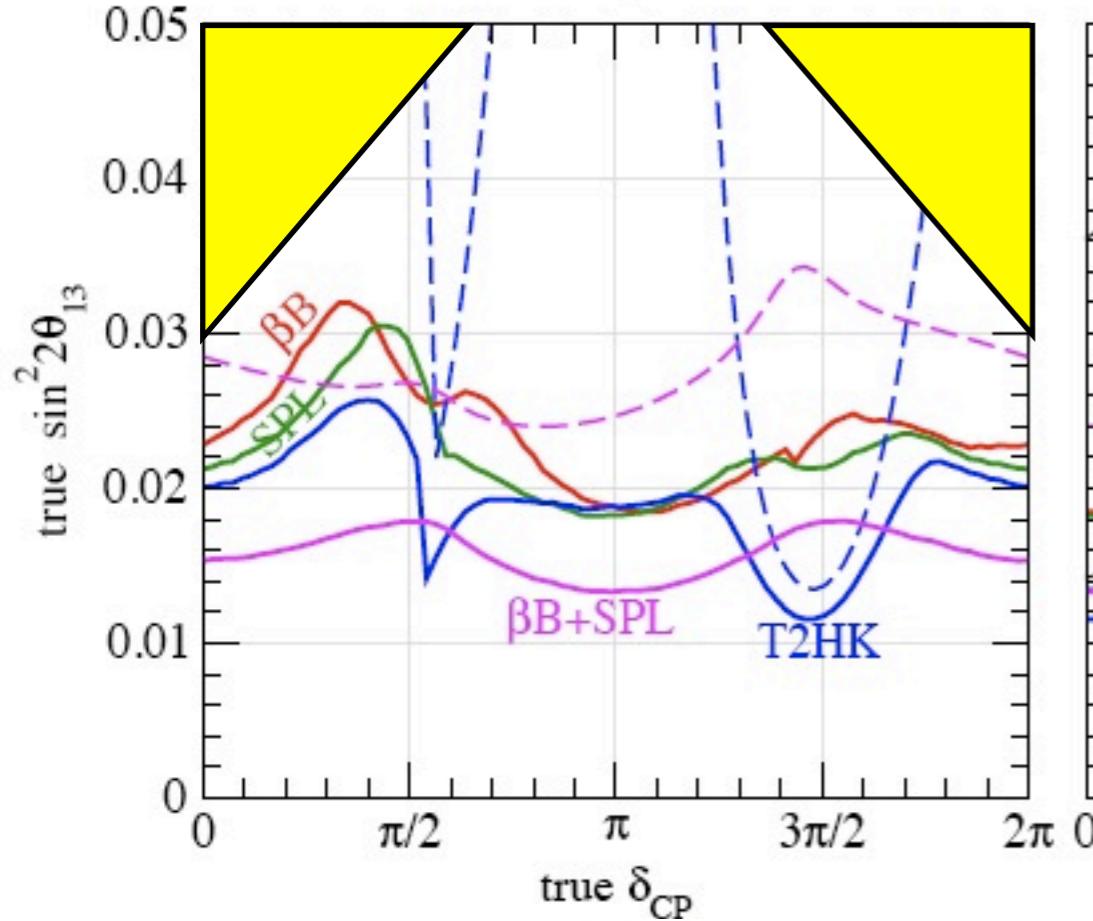

Option A

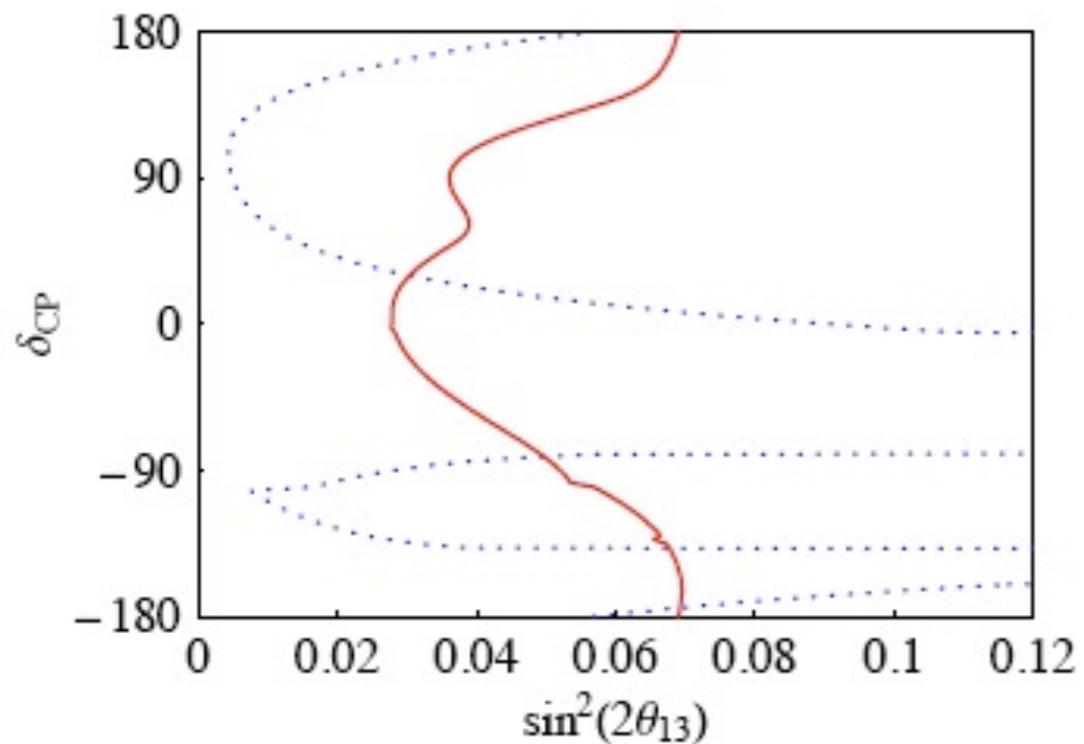

Option B
No atm data
flux = $O(10^{18})$

Example: determine the mass hierarchy

2 σ sensitivity to normal hierarchy from LBL + ATM data

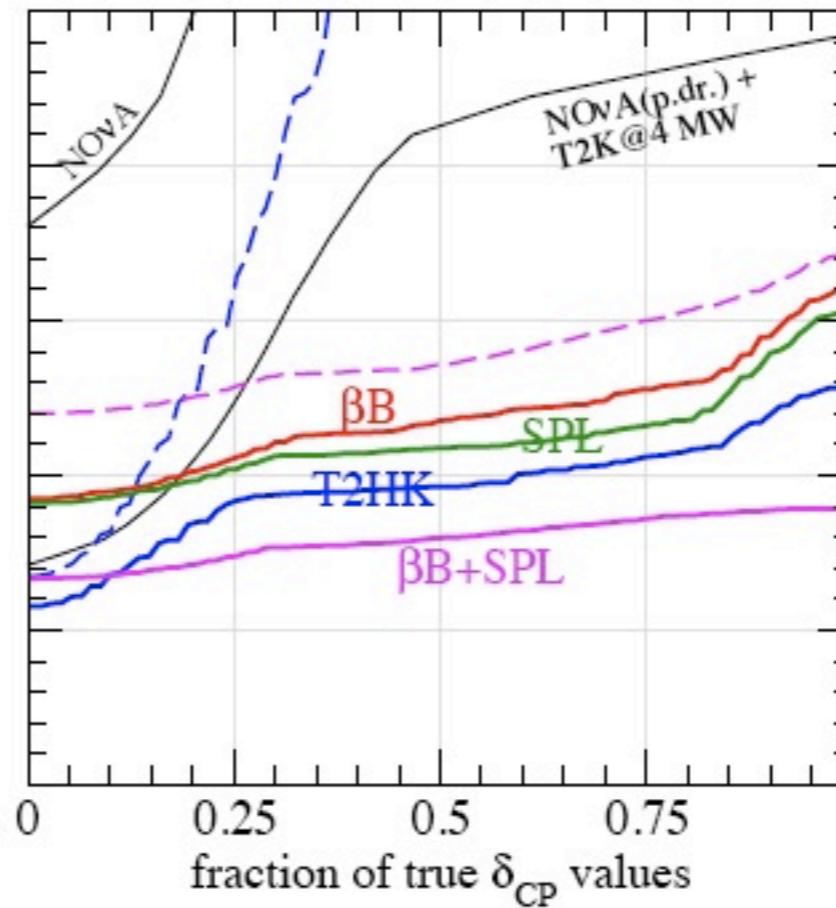

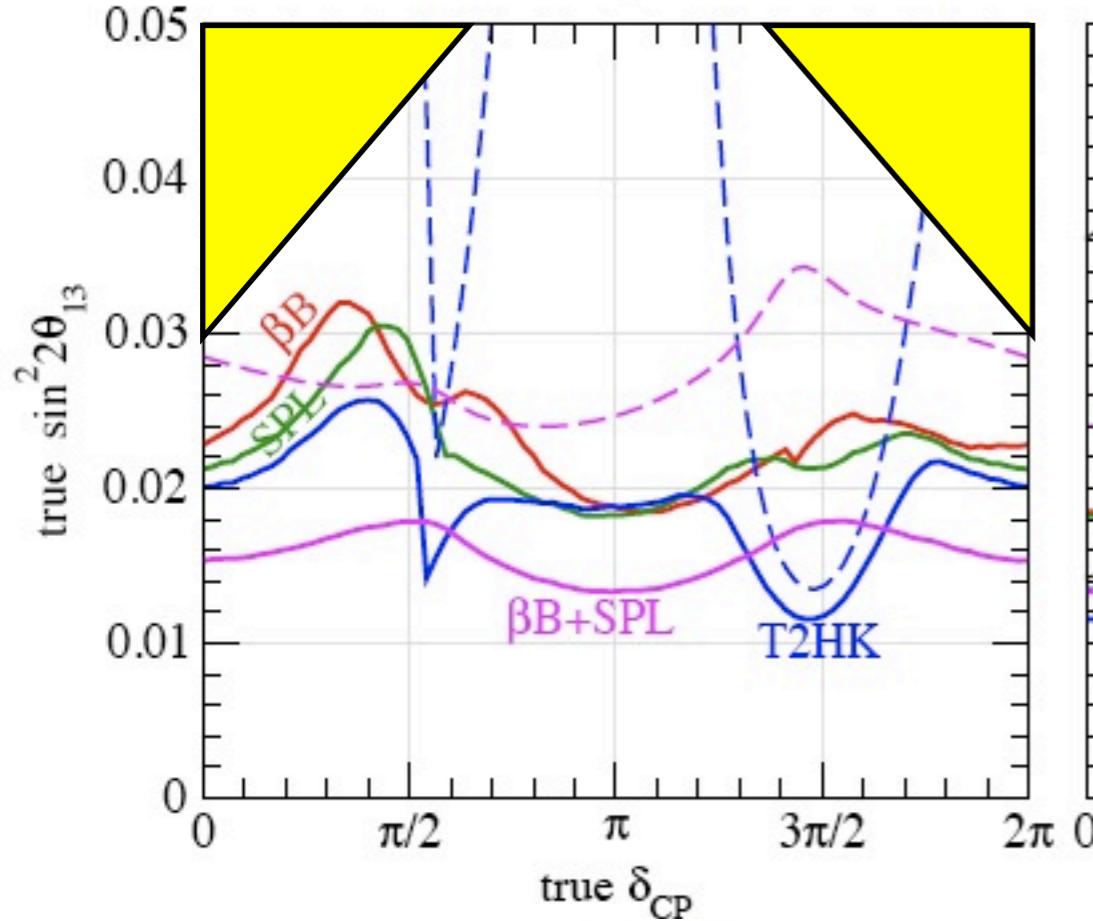

Option A

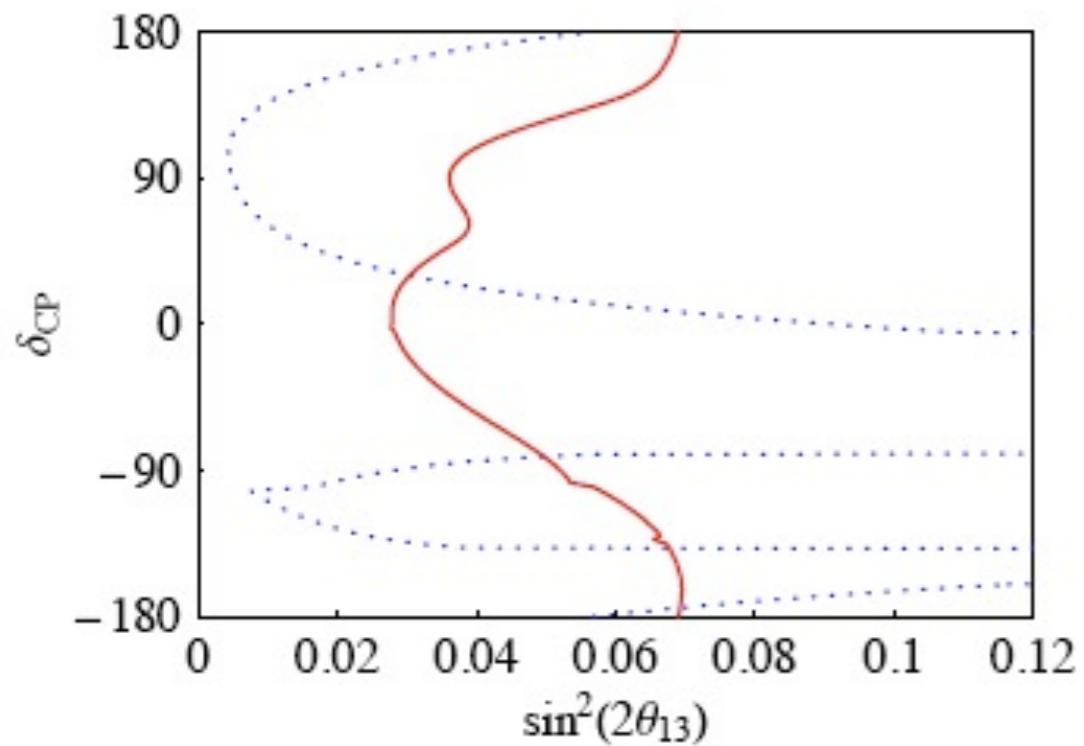

Option B
No atm data
flux = $O(10^{18})$

Example: determine the mass hierarchy

2 σ sensitivity to normal hierarchy from LBL + ATM data

Option A

Option B
No atm data
flux = $O(10^{18})$

With more flux,
better results.
Best option, would be
to increase γ
