

Material Parameter Optimisation for Cable Fire Simulation

Thursday 2 February 2017 17:00 (30 minutes)

An overview on simulating the cone calorimeter test in FDS is given. Based on data from the CHRISTIFIRE project, an evolutionary algorithm is used to create input parameter sets to be used in large scale fire simulation, later on.

Presenter: HEHNEN, Tristan (Bergische Universitaet Wuppertal (DE))

Session Classification: Presentations of the first day
