

Fire Dynamics in Tunnels: Temperature Distribution and Structural Behaviour

Friday 3 February 2017 09:45 (30 minutes)

Study of the temperature distribution in space and time beneath a tunnel ceiling subject to a transient fire. Including a description of the structural behaviour of tunnels under fire and the possible failure modes that could be used to estimate the probability of failure of the tunnel.

Presenter: ROSIGNUOLO, Francesco

Session Classification: Presentation of the second day
