Deep-learning Top Taggers or The End of QCD?

Wednesday, 22 March 2017 09:45 (20 minutes)

<https://arxiv.org/abs/1701.08784>

Machine learning based on convolutional neural networks can be used to study jet images from the LHC. Top tagging in fat jets offers a well-defined framework to establish our DeepTop approach and compare its performance to QCD-based top taggers. We first optimize a network architecture to identify top quarks in Monte Carlo simulations of the Standard Model production channel. Using standard fat jets we then compare its performance to a multivariate QCD-based top tagger. We find that both approaches lead to comparable performance, establishing convolutional networks as a promising new approach for multivariate hypothesis-based top tagging.

Presenter: KASIECZKA, Gregor (Eidgenoessische Technische Hochschule Zuerich (CH))

Session Classification: Identification and Tagging Mini-Workshop
