ESnet Update

Tuesday, 25 April 2017 14:55 (25 minutes)

ESnet staff are in the early stages of planning the next generation of their network, ESnet6. ESnet is providing network services to all of the large US LHC computing centers and this community is the biggest user of the current ESnet5 network. ESnet6 is expected to be online during the LHC Run 3 and Run 4. How the LHC community uses the network has a big impact on the ESnet6 project, and the ESnet6 network.

This talk will provide a brief overview of the ESnet6 project process, the ESnet6 R&D efforts, WAN capacity planning, and how network usage patterns impact network operations and the capacity planning process.

Length of talk (minutes)

20

Scheduling constraints / preferences

I would prefer to present Monday or Tuesday, but I am flexible.

Primary author: Mr METZGER, Joe (ESnet)

Presenter: Mr METZGER, Joe (ESnet)

Session Classification: Security and networking

Track Classification: Security & Networking
