

# Tape Report

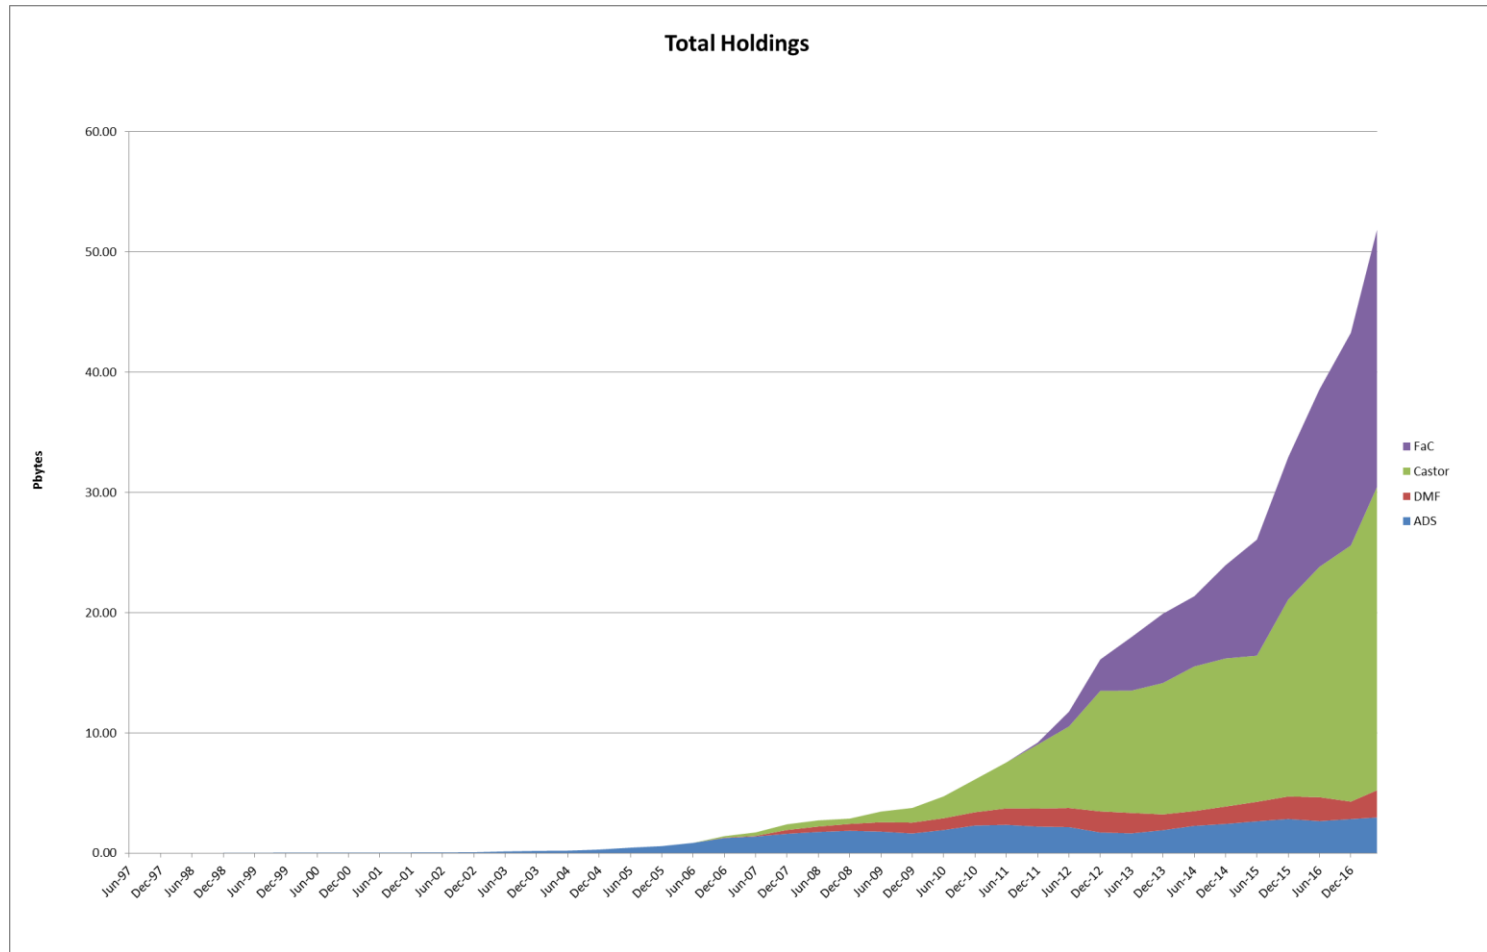

(As I know I'll be dropped in it)

- Same two 10K slot SL8500 tape libraries
  - One for T1 usage.
- All Production tape servers are at 2.1.16-0
  - Some timing issue with drives not being empty when next mount is issued. Castor takes drive down
- Preprod tapes at 2.1.16-0 via Aquilon. Will test on SL7 at some point.

# Tape Report

- Running a mix of drive types
  - T10KB – Only used on non castor services. Plan to replace this/next year
  - T10KC – Only used on Facilities Castor.
    - 14 drives
  - T10KD – Being used by all experiments, migration from C finished in Jan
    - 28 drives T1
    - 9 drives Facilities

# Library Usage

# Tape Futures

- Drives
  - ? LTO, any work to get LTO8 in castor?
- No plans to change anything on library front
  - Well as long as Oracle keep supporting SL8500
  - May have a look round 2020.
- Looking at getting SDP2 installed
  - Just about there. Need to change IP address of libraries to finish work.

# ACSLs

- ACSLS
  - Now running ACSLS 8.4 on Oracle linux
  - All running well after issues last year.
