

# *CDR Preparation*

*Why a module review?*

- CDR-what?
- CDR-when?
- why module review?
- Summary

## **Present layout of CDR**

**Vol1: Executive Summary: target 20 pages, value estimate**

**Vol2: Physics at CLIC**

write-up progress will depend on LHC results; presently we use the report from 2004

**Vol3: The CLIC accelerator and site facilities**

**Vol4: The CLIC physics detectors**

→ [https://edms.cern.ch/file/1001132/CLIC\\_CDR-LAYOUT\\_08.xlsx](https://edms.cern.ch/file/1001132/CLIC_CDR-LAYOUT_08.xlsx)

# Basics of CDR

- 3 TeV option for CLIC as baseline for the optimization of the parameters.
- Construction staging starting from the lowest demanded energy (let us say 500 GeV) as indicated by LHC results up to the full 3 TeV machine.
- Parameter changes and optimization for the “500 GeV” machine plus additional consequences for later energy upgrades in a separate chapter
- 4 volumes
- Volume 3:
  - Detailed description of the CLIC machine most critical subjects
  - Description of the physics and beam dynamics of all machine components following the order in the CLIC PBS.
  - Technology chapters grouped together by disciplines.

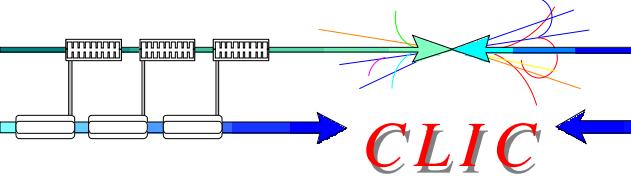

# Present layout of technical systems part

subject	details	author
3) technical systems detailed descriptions; organized by technologies		
	e- source	Louis Rinolfi
	e+ source	Louis Rinolfi
	e+ polarization	Allesandro Variola
	Magnet systems	Michele Modena
	Vaccum Systems	Miguel Jimenez et al.
	RF systems	
	Accelerating Structures	Walter Wuensch
	Decelerating Structures	Igor Syratchev
	Two Beam Module	Germana Riddone
	Modulators	Carlos de Almeida Martins
	Klystrons	Erk Jensen
	Low Level Rf systems	Erk Jensen et al.
	Beam Synchronous Timing	Erk Jensen et al.
	Dumps, Collimators and Beam Stoppers	Roberto Losito
	Machine Protection	Michel Jonker
	Beam Instrumentation	Rhodri Jones/Alan Burns
	Beam Transport equipment (kickers, RF deflectors)	Volker Mertens et al.
	RF feedback equipment	Giulio Morpurgo
	Control System, general timing system	Eugenia Hatziangeli et al.
	Stabilization equipment	Claude Hauviller
	Power Converters and DC network	Andre Beuret

## **CDR- why end 2010?**

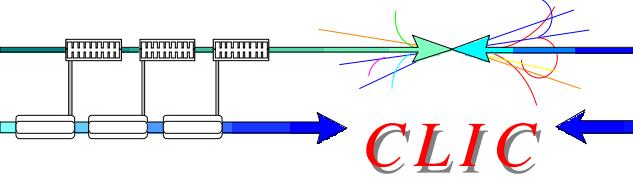

- “window of opportunity” after first LHC results
- CDR = starting point for an increase in the CLIC study resources for TDR phase
- Motivation to show CLIC feasibility or have the R&D path for feasibility demonstration laid out
- Timing for CDR is part of the CERN medium term plan as agreed by council in June 2009 → next page

## *Sort of CDR planning*

	Freeze Baselines	Feasibility R&D, Extra Studies, Finalization of concepts	Feedback from Cost WG	Parameter Rebalancing	Abstracts and keywords from authors	Progressive Reduction
Q3/2009						
Q4/2009						
Q1/2010						
Q2/2010						
Q3/2010						
Q4/2010						

## *Several reviews in preparation of CDR*

- Following the above planning, until end 2010 we want to freeze the major parameter and hardware baselines:  
in order to:
  - Continue all detailed studies on feasibility within a coherent context
  - Have time to do the individual designs
  - Be able to evaluate the cost
- Further “completely new options” will probably not be considered in the CDR, but their follow up will be left for the TDR phase (2011-2016)
- - 1) beam instrumentation review: June 2009
  - 2) module review: September 2009proposed:
  - 3) FF review: winter 2009/2010
  - 4) machine protection: spring 2010
  - 5) stabilization: summer 2010
