

The NorduGrid project and the ARC middleware

Wednesday 26 August 2009 16:30 (45 minutes)

ARC is one of the top GRID middlewares used nowadays among several organizations, most notably CERN and LHC experiments. Very clear architecture, robust design, non-intrusive installation and portability make it popular among several clusters in many countries.

An overview of ARC, Nordugrid and associated projects will be presented with the current status of operation, specific features and unique solutions. The development of the new major ARC release 1.0 will provide much higher extensibility and easier interoperation with other GRID solutions.

Author: FILIPCIC, Andrej (Jozef Stefan Institute, Ljubljana)

Presenter: FILIPCIC, Andrej (Jozef Stefan Institute, Ljubljana)

Session Classification: Lectures (Wednesday afternoon)

Track Classification: Infrastructures and Grid technologies
