Extensions of the European Grid Infrastructure

Saturday 29 August 2009 09:00 (45 minutes)

In the past years several so-called e-Infrastructures have been supported by the European Commission not only limited to Europe but also trying to export/extend the model to other regions of the world.
The presentation will present first the state of art of those e-Infrastructures showing their differences and commonalities and then address the future challenges and the possible steps forward.
