The mass of the Universe

I will talk about the following calculations: The mass of the core of universe: 1.44 • 10 raised to the power of 59 kg. The mass of the galaxies of universe: 1.44 • 10 raised to the power of 56 kg. The mass of the stars of universe: 8 • 10 raised to the power of 52kg. The radiating energy of the Core of Universe: 3 • 10 raised to the power of 56watt
