AIM

- Now you all know:
  - How to install DIRAC from scratch
  - Install/run services/agents
- Next step:
  - Learn how to follow the documentation
- Aim:
  - Each group one system
  - Test/correct/write the documentation
  - General feedback on the documentation

Topic list

- SE + SEProxy: difficulty 2 because no doc whatsoever

- DFC: difficulty 1 , trivial to install

- RMS (2 agents + 2 services): difficulty 3 because a lot of configuration options

- FTS (requires access to a real fts server to test): difficulty 2

- ProxyManager: difficulty 1, and as a bonus, configure a different username&password for the DB, as a good practice

- RSS: difficulty depends from how far you go (see Federico's talk). It should be relatively easy, since there is a lot of doc

- Anything you chose, providing you have enough experience
