Emission of Photons and Relativistic Axions from Axion Stars

Monday 8 May 2017 18:00 (15 minutes)

The number of nonrelativistic axions can be changed by inelastic reactions that produce relativistic axions or photons. Any even number of nonrelativistic axions can scatter inelastically into two relativistic axions. Any odd number of axions can annihilate into two photons. This reaction produces a monochromatic radio-frequency signal at an odd-integer harmonic of the fundamental frequency set by the axion mass. The loss rates of axions from axion stars through these inelastic relations are calculated using the framework of a nonrelativistic effective field theory. Odd-integer harmonics of a fundamental radio-frequency signal provide a unique signature for collapsing axion stars or any dense configuration of axions.

Summary

Primary authors: BRAATEN, Eric (Ohio State University); MOHAPATRA, Abhishek (The Ohio State University); ZHANG, Hong

Presenter: MOHAPATRA, Abhishek (The Ohio State University)

Session Classification: Dark Sector & ALPs
