

afs for plus and batch

Gavin McCance
IT-CM

plus

- Both /afs and /eos mounts provided. Home-dirs in AFS.
- Once new version of EOS is available, we'll provide **lxplus-eos.cern.ch** with home-dirs in EOS allowing users to check use-cases and us to check for any service issues
- Eventual home-dir change to be negotiated later as part of AFS retirement

batch

- Both /afs and /eos mounts provided for both HTCondor and LSF (no coupling of AFS retirement to HTCondor migration.)
 - Jobs typically write to /pool anyway
- Will keep both mounts until storage team agree with users that we can drop /afs
- Some capacity will be made available without AFS for “AFS-less” testing on HTCondor (*)
