

# What I've been doing

- 13 hours cumulative work
- Relearning Labview
- Obtaining linear fit on bus tape fiducials
- Only have 6 images
- Top strip: 0.207  $\mu\text{m}/\text{mm}$
- Bottom strip: 0.109  $\mu\text{m}/\text{mm}$
- Difference: 0.098  $\mu\text{m}/\text{mm}$

# Next steps

- Do fit including remaining fiducials
- Error estimation
  - reliability of circular edge finder
  - conversion from pixels to  $\mu\text{m}$
  - precision placement of XYZ stage (1  $\mu\text{m}$ ?)
